How to hide secret text inside an image using Python?

Nothing complicated, you just need the Stegano library:

```
# pip install stegano

from stegano import lsb

secret = lsb.hide('image.png', 'very secret text')

secret.save('secret_image.png')

print(lsb.reveal('secret_image.png'))
```

A quick question: how is this ability to store text in a picture implemented?

How easy is it to detect such text hiding?
