

Chapter Four: Motivation Concepts and their Application

Chapter contents:

- *Meaning and definition of motivation*
- *Characteristics of motivation*
- *Importance of motivation*
- *Types of motivation*
- *Theories of motivation*

What is Motivation?

- *The term motivation is derived from the Latin word “MOVERE”, meaning “TO MOVE.”*
- *Motive is the urge, need, want or desire that induces a person to work*
- *Motivation is anything that affects behavior in pursuing a certain outcome (Lussier & Achua)*
- *Mc Farland has defined “motivation as the way in which urges, drives, desires, aspirations, strivings needs direct, control or explain the behavior of human beings”*

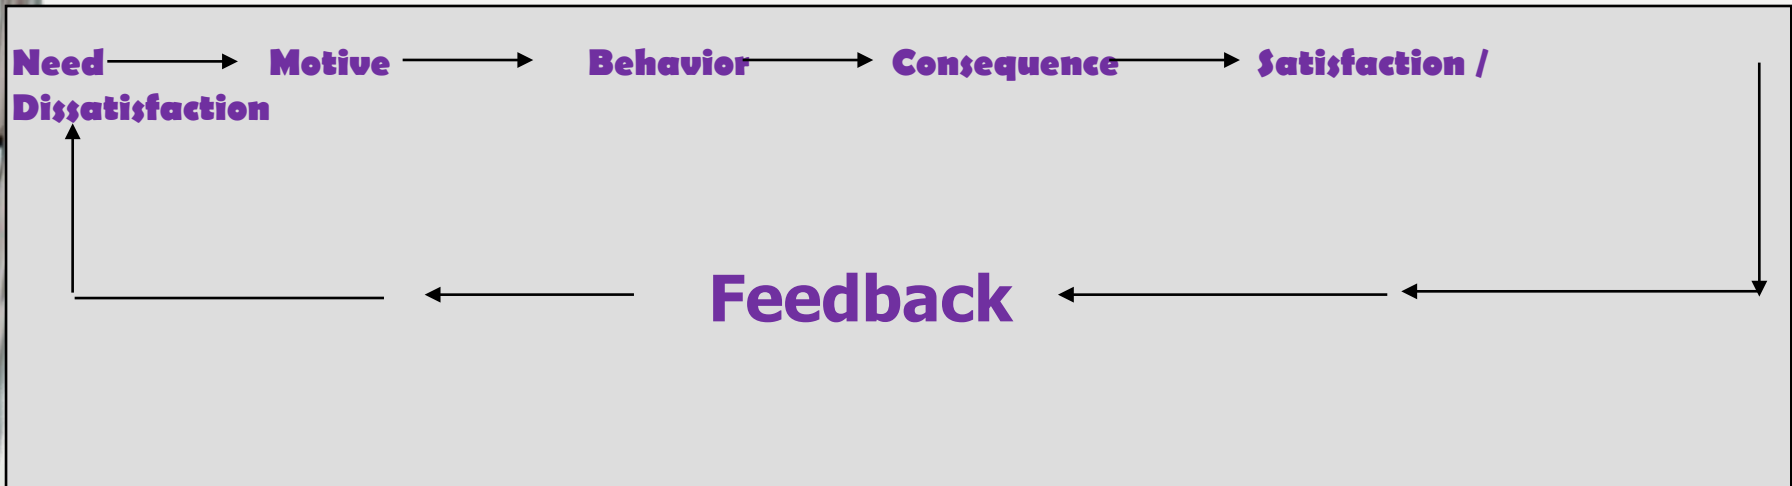

What is Motivation?

- *Scot defined motivation as “a process of stimulating people to action or accomplish desired goals”*
- *Memoria defined motivation as “inner burning passion caused by need, wants and desire which propels an individual to exert his physical and mental energy to achieve desired objectives”.*

Characteristics of Motivation

- *Motivation is a psychological phenomenon*
- *Motivation is a continuous process*
- *Motivation is caused due to anticipated perceived value from an action*
- *There are unsatisfied needs (motives)*
- *Individual is motivated by positive motivation*

The Motivation Process

Through the motivation process, people go from need to motive to behavior to consequence to satisfaction or dissatisfaction

Importance of motivation

- *High level of performance*
- *Low employee turnover and absenteeism*
- *Acceptance of organization change*
- *Organizational image*

Types of Motivation

- *On the basis of the approach (Positive and Negative)*
- *On the basis of type of incentive used (Financial, non-Financial)*
- *On the basis of the nature of reward used (Extrinsic and intrinsic)*

A story of a donkey man: Carrot and Stick

Motivation Theory

Carrot and Stick Motivation Theory

Don't work hard, work Intelligent

Lesson

Incentive Motivation works when...

Carrot is sweet
enough

Load is
light
enough

Donkey is
Hungry enough

Major Motivation Theories

Classification of Motivation Theories

1. Content Motivation theories

Specific Motivation Theory

- a. Hierarchy of needs theory
- b. Two-factor theory
- c. Acquired needs theory

2. Process Motivation Theories

- a. Equity theory
- b. Goal-setting theory
- c. Expectancy theory

3. Reinforcement Theory

Type of Reinforcement

- a. Positive
- b. Avoidance
- c. Extinction
- d. Punishment

Content Motivation Theories

graph TD; A[Content Motivation Theories] --> B[Hierarchy of Needs]; A --> C[Acquired Needs]; A --> D[Two-Factor]
```

*Hierarchy of
Needs*

*Acquired
Needs*

Two-Factor

Hierarchy of Needs Theory

Maslow's Hierarchy of Needs Theory

- *The hierarchy of needs theory proposes that people are motivated through five levels of needs – physiological, safety, belongingness, esteem, and self-actualization*
- *Assumptions:*
 1. *Only unmet needs motivate*
 2. *People's needs are arranged in order of importance (hierarchy) going from basic to complex needs*
 3. *People will not be motivated to satisfy a higher-level need unless the lower-level need(s) has been at least minimally satisfied*
 4. *Hierarchical order from low to high level of need*

Maslow's Hierarchy of Needs Theory

- *The major recommendation to leaders is to meet employees' lower-level needs so that they will not dominate the employees' motivational process.*
- *You should get to know and understand people's needs and meet them as a means of increasing performance*

Herzberg's two factor theory

- Herzberg combined lower-level needs into one classification he called *hygiene or maintenance*; and higher-level needs into one classification he called *motivators*
- The two-factor theory proposes that people are motivated by motivators rather than maintenance factors
- *Two factors: Maintenance (Extrinsic Factors) and Motivators (Intrinsic Factors)*

Maintenance (Extrinsic Factors)

- *Maintenance factors are also called extrinsic motivators because motivation comes from outside the person and the job itself.*
- *Extrinsic motivators include pay, job security, and title; working conditions; fringe benefits; and relationships (supervision)*

Motivators (Intrinsic Factors)

- *Motivators are called intrinsic motivators because motivation comes from within the person through the work itself. Intrinsic motivators include achievement, recognition, challenge, and advancement.*
- *These factors are related to meeting higher-level needs, and are better at motivating than extrinsic factors*

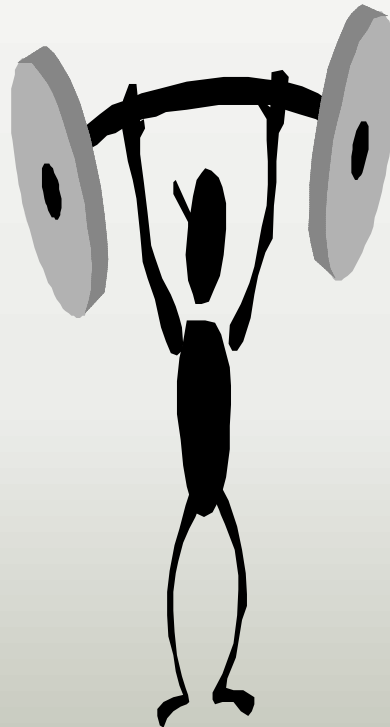

Acquired Needs Theory

*Acquired needs theory proposes that people are motivated by their need for **achievement, power, and affiliation***

Affiliation

Power

Achievement

Acquired Needs Theory

- *Acquired needs theory proposes that people are motivated by their need for achievement, power, and affiliation*
- *Acquired needs theory says that all people have the need for achievement, power, and affiliation, but to varying degrees*

Motivating employees with a high *n Ach*

- *Give them non-routine, challenging tasks with clear, attainable objectives.*
- *Give them fast and frequent feedback on their performance.*
- *Continually give them increased responsibility for doing new things.*
- *Keep out of their way*

Motivating employees with a high n Pow

- *Let them plan and control their jobs as much as possible.*
- *Try to include them in decision making, especially when they are affected by the decision.*
- *They tend to perform best alone rather than as team members.*
- *Try to assign them to a whole task rather than just part of a task.*

Motivating employees with a high *n Aff*

- Be sure to let them work as *part of a team*.
- They derive satisfaction from the people they work with rather than the task itself.
- Give them lots of praise and recognition.
- Delegate responsibility for orienting and training new employees to them.
- They make great buddies and mentors

Process Motivation Theories

- *Equity*
- *Expectancy*
- *Goal-setting*

Equity Theory

- *People want to be treated fairly.*
- *Employees have to believe they are being treated fairly if they are to work together effectively*
- *Equity theory proposes that people are motivated when their perceived inputs equal outputs.*

Equity Theory

- *Through the equity theory process, people compare their **inputs** (effort, experience, seniority, status, intelligence, and so forth) and **outputs** (praise, recognition, pay, benefits, promotions, increased status, supervisor's approval, and so forth) to that of relevant others.*
- *Equitable distribution of pay is crucial to organizations*

Equity Theory

(proposed that employees are motivated when their perceived inputs equal outputs)

**Our inputs
(contributions)**

=

**Others' input
(contributions)**

**Our outcomes
(rewards)**

=

**Others' outcomes
(rewards)**

Expectancy Theory

- *Expectancy theory is based on Victor Vroom's formula:*

Motivation = expectancy × instrumentality × valence

- *Expectancy theory proposes that people are motivated when they believe they can accomplish the task, they will get the reward, and the rewards for doing the task are worth the effort.*

The three variables

- *Expectancy* refers to the person's perception of his or her ability (probability) to accomplish an objective.
- *Instrumentality* refers to belief that the performance will result in getting the reward
- *Valence* refers to the value a person places on the outcome or reward

Goal-Setting Theory

- Goal-setting theory proposes that *specific, measureable and difficult goals motivate people.*
- *Our behavior has a purpose, which is usually to fulfill a need.*
- *Goals give us a sense of purpose as to why we are working to accomplish a given task*

Reinforcement Theory

- *B. F. Skinner, reinforcement motivation theorist, contends that to motivate employees it is really not necessary to identify and understand needs (content motivation theories), nor to understand how employees choose behaviors to fulfill them (process motivation theories).*
- *All the manager needs to do is understand the relationship between behaviors and their consequences, and then arrange contingencies that reinforce desirable behaviors and discourage undesirable behaviors*

Reinforcement Theory

- *Reinforcement theory proposes that through the consequences for behavior, people will be motivated to behave in predetermined ways.*
- *Types of Reinforcement (Positive, Avoidance, Extinction, and Punishment)*

Thank you
