

PLANNING AND MANAGING HUMAN RESOURCES FOR HEALTH

Over view

- Health system needs an appropriate number of qualified people to fulfill its mission and to meet the need of community it serves
- The goal of the HRM is to identify and provide the right number of competent staff to meet the need of the community

Over view cont...

- A main objective of health workforce planning is to have the right number and mix of health practitioners with appropriate skills in the right places at the right time, to provide quality services to those who need them. **However,**
- Some of the world's poorest countries face rising death rates and plummeting life expectancy, even as global pandemics threaten us all. Human survival gains are being lost because of feeble national health systems.

Over view cont...

- On the frontline of human survival, we see overburdened and overstressed health workers, too few in number, without the support they so badly need—losing the fight. Many are collapsing under the strain.
- The WDR of 2004 stated: Without improvements to the human resources situation, the health-related MDGs cannot be achieved

Over view cont...

- Why is human resource so important for HSOs/HS?
 - To implement strategies
 - To accomplish objectives
 - To fulfill organizational mission

Over view cont...

- Constraints to scaling up
- Central role of the workforce in the health sector
- Human resources for health account for a high proportion of budgets assigned to the health sector
- Economic and human costs of poor HRH management are particularly high in the health sector

Over view cont...

- The devastation of **HIV/AIDS**—increasing workloads on health workers, exposing them to infection, and testing their morale.
- Accelerating labor migration, causing losses of nurses and doctors from countries that can least afford the “**brain drain.**”

Terminologies

- **Brain drain:** Outflow of health professionals to other countries, from the public to the private sector, or out of the health sector
- **Balance:** Effective deployment and distribution of health personnel by geography, among levels of care, and among types of services for the equitable provision of quality health services
- **Deployment** Process of assigning personnel among regions or types and levels of services

Terminologies cont...

- **Human resources for health:** All individuals engaged in the promotion, protection, or improvement of population health, from both the formal and informal sector
- **Human resource policies:** Guidelines and directions within the health sector and the wider economic, social, and political context that regulate the use of workers

Terminologies cont...

- **Incentives:** Financial and non financial benefits designed to improve staff performance and motivation
- **Management:** Process of creating an appropriate organizational environment and ensuring that personnel perform adequately using strategies to identify and achieve the optimal number, mix, and distribution of personnel in a cost-effective manner

Terminologies cont...

- **Motivation:** An individuals' degree of willingness to sustain efforts towards achieving certain goals
- **Recruitment:** Process of searching for personnel to enter a particular job or position
- **Registration:** Official recording of the names of persons who have certain qualifications to practice a profession or occupation
- **Remuneration:** Payment to a person for a service or expense
- **Retention:** Maintaining personnel within the health system, often by offering adequate incentives

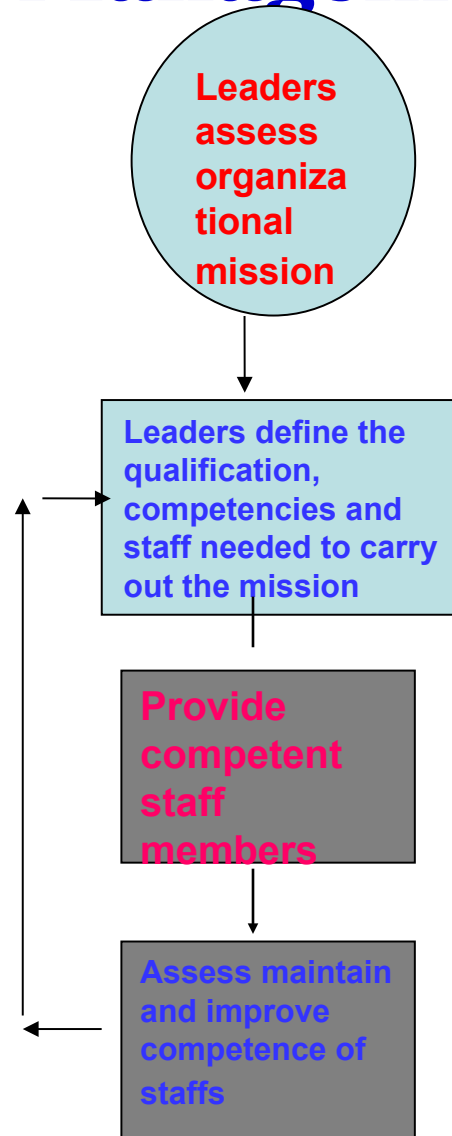

Terminologies cont...

- **Work environment:** Characteristics of the environment in which a person is expected to work. Includes terms of employment, benefits, and physical and social climate
- **Workforce:** People who work in the various professions of health care— physicians, nurses, midwives, pharmacists, dentists, associate professionals, and community health workers— whose goal is to improve the health of the populations they serve

Terminologies cont...

- **Workforce planning** :Process to provide a framework for staffing decision making based on a strategic plan, budgetary resources, and a set of desired workforce competencies.
- It incorporates an analysis of the present and future workforce and possible gaps and surpluses
- *Human resources development (HRD)*, as applied to human resources for health (HRH), includes the planning, production, and management of health personnel.

Human Resource Management function

HRM function cont....

- It is a process of estimating the number of persons and the kind of knowledge, skills and attitudes they need to achieve predetermined health targets and ultimately health status objectives.
- involves specifying who is going to do what , when , where , how and with what resources for what population group or individuals , so that the knowledge and skills necessary for adequate performance can be made available according to predetermined policies and time schedules.
- the planning must be a continuing and not a sporadic process. And it requires continuous M&E.

HRM function cont....

- All describes the health human resource process as involving three major and interrelated steps: **planning, production, and management**
- HHRP in most countries has been poorly conceptualized, intermittent, varying in quality, profession-specific in nature, and without adequate vision or data upon which to base sound decisions

HRM(personnel administration)

- Characterized by staffing activities, program and policies concerned with acquisition , retention and maintenance and separation of human resources.

Staffing activities

A time flow of distinct phases

- **Acquisition** :-human resource planning , recruitment , selection and orientation
- **Retention and maintenance**:- performance appraisal , placement training and development , discipline(corrective actions), compensation and benefit administration , employees assistance and career development and safety and health
- **Separation** :retirement, resignation,
Discharge and death

HRP

- Precedes the recruitment , selection , and orientation of new employees
- Staffing needs are determined
- Staff needs are driven by organizations , growth and turn over.
- Service may be eliminated/ point of delivery may be changed
- Constantly monitor /the need for employees
- Human resource planning ensures that the organization have the right number of people , appropriate qualification and skills and delivers appropriate levels of quality of services.

HRP cont...

It involves five steps

- Profiling
- Estimating
- Inventorying
- Forecasting
- Planning

Step 1 :-profiling

- Initial step is to profile the HSO/HS at some future point
- estimating the number and type of job (skills)
- Subjective but **anticipated** demand for service change in profession profile or labor supply
- Staffing for **new technology** can be taken into account

Step 2 :- estimating

- Consider expected change, new services, reengineering initiatives, or strategic organizational change

Steps cont....

Step 3 :- inventorying

- **Present** employees and their skills
- Talent inventorying, conducting HR audit
- Skills , abilities and potential and how are they being used, training need, career path
- **Step 4: Forecasting**
- An assessment of changes in the present work force
- Entries Vs Exit or transfers
- Consider promotion

Steps cont....

Step 5 Planning

- **Assumption + information are bases for planning**
- **Step 1 through step 4 are the bases for planning**

Human resources sources

- From external and internal
- Internal (filling HSOs vacancy by transferring or promoting)

Advantages

- cost effective, quicker and reduces recruiting and relocation costs and enhances employee's morale

Disadvantages add from your experience

HR sources cont...

- **External (labor market supply : outside of the organization**
- **Advertising . pass the work to potential employees,**

What are the major recruitment problems in the health sector?

JOB analysis and description

- **Job analysis** : observing and studying a job to determine its **contents** (duties and responsibilities)
- **Conditions under which it is performed**
- **Its relationships to other jobs**
- **Analysis results**
- **Identifying skills, training, and abilities**
- **Is the source for developing job description**

JOB description

Varies from organization to organization

It includes

- **Job title**
- **Locations**
- **Job summary**
- **5-9 general duties and responsibilities**
- **supervision given/received**
- **special work conditions > hazards/classifications**
- **qualification : minimum education, training , experiences , demonstrated skills is required**
- **should be continuously updated**
- **fundamental document in legal disputes**
- **EX Develop job description for zonal TB/Leprosy expert**

recruitment

- **Recruitment :**
 - Searching for and attracting prospective employees
- **Selection**
- Select from among using job description or qualification as a guide
- **Basic source of information**
 - application form
 - pre employment interview
 - Testing
- **Application form and pre employment interviews**
 - education
 - training
 - previous employment

orientation

- **Induction and orientation**

Follows selection

- **Induction:** ensuring that employee can perform the job with out danger to them selves and clients
- **Orientation:** Physical Information about the physical facility org structure
- **advantages** :gives a clear understanding of what they need to know

Retaining employees

- HRM maintenance and retention activities occur throughout the term of employment. These activities include \
- Appraising each employees job performance
- Moving employees within the organization through promotion, demotion and transfer
- Disciplinary counseling and separation when necessary (hire and fire)
- Administering compensation and benefits
- Providing employee assistance and career counseling
- Ensuring healthful workplace and personal safety

Retaining employees cont...

- **Performance appraisal**
- The results of performance appraisal has many uses
 - Determining whether individual work results are consistent with expectations
 - Provide feedback for both the employee and supervisor
 - Identify high, marginal and unsatisfactory performers
 - **Less than satisfactory performance :**
 - Lack of technical job skills
 - Poor process or job design

Performance appraisal cont...

- Identify potential and desirable employee movement within the organization
- Providing information for compensation
- Provide information for employee assistance and counseling
- Virtually the HRM retention activities are linked to performance appraisal

Performance appraisal cont...

Appraisal Methods

- **There are many approaches**
- Rating scales
- Person to person comparison
- Check list
- Critical incidence methods

Performance appraisal cont...

- Most common method is rating scale method which filled by the manager

The scale typically specifies

1. personal traits and behaviors such as cooperativeness , dependability , initiatives ,judgments, and attitude.
 2. job dimension attributes , such as the quantity of work, quality of work, and job knowledge.
- **For each scale there are usually a scoring mechanisms using descriptive adjectives**

Performance appraisal cont...

Other approaches

- inputs from peers and subordinates
- self appraisal and customers

Benefits of Systematic appraisal

- It provides a standard format by which managers through out the organization assess the employee's performance.
- It also forces the managers to observe how well employees are performing and to consider what can be done to improve performance
- Employees have the right to know how well they are performing

Appraisal problems

- Managers don't agree on the definitions of terms
- One managers appraisal of employees may be more critical than another's
- Some don't give low ratings because they are afraid of antagonizing subordinates
- Low ratings may be reflecting negatively on managers performance
- Rate perceptual biases--→no one is “excellent”

Training and Development

Training program

- A design to maintain or improve current job performance
- **Development program**
- Develop skill necessary for future work activities

Procedures to determine training needs

1. performance appraisal

2. analysis of job requirement

1. skills and knowledge specified are examined

3. organizational analysis

1. effectiveness of the organization in meeting its goals are analyzed to determine where differences exist

4. employee survey

Training and Development cont...

On the Job Training

- Job rotations
 - Employee works on a series of job -> period of time
 - Internship: combined with classroom instruction
 - Apprenticeship: trained under highly skilled coworker
- Off the job training : Takes place outside the workplace but attempts to simulate activities in working condition

Compensation administration

- Is one of the most important aspect of maintaining and retaining
- Wages, salaries, and fringe benefits
- It affects the organization ability to attract and retain qualified employees

Work place health and safety

- Major contributing factor for retaining a work force
- Responsibility of the employers to provide a secure and safe work place for their employees and customers

Discipline (Corrective counseling)

- Used to be associated with punishment
- Means corrective counseling
- Procedures
 - Should be based on facts with clear and demonstrable justifications
 - Treated consistently
 - Progressive and related to behavior
 - Unrecorded oral warning
 - Oral warning noted in the employment record
 - Written warning noted in the employment record
 - Suspension from the job
 - Discharge . **FOLLOW the 1994 /2002 CPA Regulations**

Separation from employment

- Why employees leave HSOs/HO?

For various reasons

- Better salary
- Discharge
- Retirement or death etc
- Pre retirement planning :is to prepare employees for changes at retirement
