Exit multiple choice questions for

Fundamental database system

Prepared by:

@Neyatibeb

KOMBOLCHA, Ethiopia

2015 E.C

1 What is not true about a view ?

- A It is a definition of a restricted portion of the database
- B It is a security mechanism
- C It is always updatable like any other table
- D All are true

[View Answer](#) [Comment](#)

Answer: Option [C]

2 Which one of the following is not a valid relational database ?

- A SYBASE
- B ORACLE
- C IMS
- D UNIFY

[View Answer](#) [Comment](#)

Answer: Option [D]

3 The file organization that provides very fast access to any arbitrary record of a file is :

- A Ordered file
- B Unordered file
- C Hashed file
- D B-tree

[View Answer](#) [Comment](#)

Answer: Option [C]

4 _____ produces the relation that has attributes of R1 and R2

- A Cartesian product

☐ B Difference

☐ C Intersection

☐ D Product

[View Answer](#) [Comment](#)

Answer: Option [A]

5 The master list of an indexed file

☐ A is sorted in ascending order

☐ B contains only a list of keys and record numbers

☐ C has a number assigned to each record

☐ D both [B] and [C]

[View Answer](#) [Comment](#)

Answer: Option [D]

6 Maximum height of a B+ tree of order m with n key values is :

☐ A $\log m(n)$

☐ B $(m+n)/2$

☐ C $\log_{m/2}(m+n)$

☐ D $\log_{(1/2m)}(n+1/2)$

[View Answer](#) [Comment](#)

Answer: Option [D]

7 In a relational database a referential integrity constraint can be specified with the help of :

☐ A primary key

☐ B foreign key

☐ C secondary key

☐ D none of the above

[View Answer](#) [Comment](#)

Answer: Option [B]

8 A host language is :

- ☐ A Query Language
- ☐ B Storage Definition Language
- ☐ C DML embedded in the general purpose language
- ☐ D None of the above

[View Answer](#) [Comment](#)

Answer: Option [C]

9 Multilevel Indexing :

- ☐ A Uses a Binary Search
- ☐ B Does away Binary Search
- ☐ C Uses a Binary Tree Search
- ☐ D None of the above

[View Answer](#) [Comment](#)

Answer: Option [C]

10 Anomalies imply additional work to be done for :

- ☐ A Insertion into relation
- ☐ B Modification of a relation
- ☐ C Loss of information due to deletion
- ☐ D All of the above

[View Answer](#) [Comment](#)

Answer: Option [D]

11 A primary key :

- ☐ A is also referred to as a composite key
- ☐ B is a unique identifier in a column
- ☐ C uniquely identifies the data in row
- ☐ D must be accompanied by a corresponding foreign key

[View Answer](#) [Comment](#)

Answer: Option [B]

12 Duplicate data is referred to as :

- ☐ A accurate data
- ☐ B redundant data
- ☐ C storage data
- ☐ D none of the above

[View Answer](#) [Comment](#)

Answer: Option [B]

13 A relation in third normal form is :

- ☐ A in first normal form also
- ☐ B second normal form also
- ☐ C from transitive dependencies
- ☐ D all of the above

[View Answer](#) [Comment](#)

Answer: Option [D]

14 In a relational database a referential integrity constraint can be specified with the help of

- ☐ A primary key
- ☐ B foreign key

☒ secondary key

☐ none of the above

[View Answer](#) [Comment](#)

Answer: Option [B]

15 In a relation

☐ Ordering of rows is immaterial

☐ No two rows are identical

☒ Both [A] and [B] are true

☐ None of the above

[View Answer](#) [Comment](#)

Answer: Option [C]

16 A super key is a set of one or more attributes that, taken collectively, allow us

☐ to identify uniquely an entity in the entity set

☐ to make the key most powerful for faster retrieval

☒ to increase effectiveness of database access

☐ none of the above

[View Answer](#) [Comment](#)

Answer: Option [A]

17 What is the degree of a table with 1000 rows and 10 column ?

☐ 10

☐ 100

☒ 1000

☐ None of the above

[View Answer](#) [Comment](#)

Answer: Option [A]

18 Which of the following commands is used to get all the columns in a table ?

A #

B *

C %

D @

[View Answer](#) [Comment](#)

Answer: Option [B]

19 One of the following is a valid record-based data models :

A Object-oriented model

B Relational model

C Entity-relationship model

D None of the above

[View Answer](#) [Comment](#)

Answer: Option [B]

20 Consider the relation scheme $R(A, B, C, D)$ where A is candidate key. With no information about FDs involved, then R is in which normal form ?

A First Normal Form

B Second Normal Form

C BCNF

D Third Normal Form

[View Answer](#) [Comment](#)

Answer: Option [D]

21 The set of attributes $X \subseteq \text{Schema}(R)$ is a super key for relation schema R only if :

Department of software engineering

- A** For all relations r over R the number of tuples in projection over X of r is the same as the number of tuples in r
- B** All attributes of X are having non null values
- C** All attributes of X are having unique values
- D** None of the above

[View Answer](#) [Comment](#)

Answer: Option [C]

22 B+ Trees are preferred to binary trees since :

- A** Disk capacities are higher than memory capacities
- B** Memory access is faster than disk access
- C** Disk are more reliable than memory
- D** Disk data transfer rates are much less than memory transfer rates

[View Answer](#) [Comment](#)

Answer: Option [B]

23 The physical location of a record is determined by a mathematical formula that transforms a file key in to a record location in :

- A** AB-tree File
- B** An indexed file
- C** A hashed file
- D** None of the above

[View Answer](#) [Comment](#)

Answer: Option [C]

24 To represent many to many relationship between two entity types A and B in a relational model :

- A** put identifying attribute (s) of A in the relation representing B

- ☐ B put identifying attribute (s) of B in the relation representing A
- ☐ C create a new relation to represent the relationship
- ☐ D it can not be represented

[View Answer](#) [Comment](#)

Answer: Option [B]

25 Which of the following is not a valid relational database ?

- ☐ A SYBASE
- ☐ B Oracle
- ☐ C FoxPro
- ☐ D UNIFY

[View Answer](#) [Comment](#)

Answer: Option [D]

26 A number of related records that are treated as a unit is called :

- ☐ A file
- ☐ B field
- ☐ C data
- ☐ D batch

[View Answer](#) [Comment](#)

Answer: Option [A]

27 One limitation of the entity-relationship model is that it cannot :

- ☐ A use generalization
- ☐ B express relationship among relationships
- ☐ C use single primary key
- ☐ D none of the above

[View Answer](#) [Comment](#)

Answer: Option [B]

28 In a relational schema, each tuple is divided into fields is called :

- ☐ A Relations
- ☐ B Domains
- ☐ C Queries
- ☐ D None of the above

[View Answer](#) [Comment](#)

Answer: Option [B]

29 The relational model is concerned with :

- ☐ A Data structure and data integrity
- ☐ B Data manipulation
- ☐ C Both [A] and [B]
- ☐ D None of these

[View Answer](#) [Comment](#)

Answer: Option [C]

30 Which of the following is not a logical database structure ?

- ☐ A tree
- ☐ B relational
- ☐ C network
- ☐ D chain

[View Answer](#) [Comment](#)

Answer: Option [D]

31 A field used to access a specific record is called :

- ☐ A key

☐ Attribute

☐ Domain

☐ None of the above

[View Answer](#) [Comment](#)

Answer: Option [A]

32 The index consists of :

☐ A list of keys

☐ Pointer to the matter list

☐ Both [A] and [B]

☐ All of the above

[View Answer](#) [Comment](#)

Answer: Option [C]

33 The following entities/attributes in a relational database should not have null values :

☐ keys

☐ variables

☐ relations

☐ all of the above

[View Answer](#) [Comment](#)

Answer: Option [A]

34 The relational model uses some unfamiliar terminology. A tuple is equivalent to a :

☐ record

☐ field

☐ file

☐ database

[View Answer](#) [Comment](#)

Answer: Option [A]

35 The set of all possible values of data items is called :

☐ Domain

☐ Attribute

☐ Tuples

☐ None of these

[View Answer](#) [Comment](#)

Answer: Option [A]

Questions

Download PDF

36 Large collection of files are called :

☐ fields

☐ records

☐ databases

☐ file system

[View Answer](#) [Comment](#)

Answer: Option [C]

37 The set of permitted values for each attribute is called its :

☐ Attribute set

☐ Attribute range

☐ Domain

☐ Group

[View Answer](#) [Comment](#)

Answer: Option [C]

38 Pick the odd one out :

- ☐ A Primary Key
- ☐ B Super Key
- ☐ C Candidate Key
- ☐ D Foreign Key

[View Answer](#) [Comment](#)

Answer: Option [D]

39 A relational database management (RDBM) package manages data in more than one file at once. How does it organize these files ?

- ☐ A Tables
- ☐ B Relations
- ☐ C Tuples
- ☐ D Both [A] and [B]

[View Answer](#) [Comment](#)

Answer: Option [D]

40 Key to represent relationship between tables is called :

- ☐ A Primary Key
- ☐ B Secondary Key
- ☐ C Foreign Key
- ☐ D None of these

[View Answer](#) [Comment](#)

Answer: Option [A]

41 The relational model is concerned with

☐ A Data structure and Data integrity

☐ B Data manipulation

☐ C Both [A] and [B]

☐ D None of these

[View Answer](#) [Comment](#)

Answer: Option [C]

42 Which key provides the basic tuple-level addressing mechanism in a relational System ?

☐ A Candidate Key

☐ B Alternative Key

☐ C Primary Key

☐ D None of these

[View Answer](#) [Comment](#)

Answer: Option [A]

43 Pick out the false statement from the following :

☐ A A view is a named derived table

☐ B A view is named relation and is virtual

☐ C A name relation is a variable

☐ D None of these

[View Answer](#) [Comment](#)

Answer: Option [D]

44 Any entity in A is associated with any number of entities in B, however an entity in B is associated with almost one entity in A

☐ A One to One

☐ B Many to Many

☐ Many to One

☐ One to Many

[View Answer](#) [Comment](#)

Answer: Option [D]

45 The union of Primary keys of the related entity sets becomes a _____ of the relation.

☐ Super Key

☐ Candidate Key

☐ Foreign Key

☐ Primary Key

[View Answer](#) [Comment](#)

Answer: Option [A]
