

Chapter Two

Leadership Theories and Styles

Leadership styles

Different leaders approach the problem of altering the behavior of followers in different ways. The pattern of behavior displayed by a leader in influencing the behavior of his followers is called the *style of leadership*.

It can be defined as the various patterns of behavior favored by leaders during the process of directing and influencing followers, which is determined by leader's *personality*, *experience* and *value system*, nature of *followers* and *environment*. When leaders interact with followers they employ combination of *traits*, *skills* and *behaviors* that is called leadership style. The style which leader adopt commonly based on combination of their beliefs, ideas, norms and values.

Different styles were needed for different situations and each leader needs to know when to exhibit a particular approach. There are many leadership styles from which to choose.

1. Autocratic or Authoritarian Leader

These leaders *keep the decision-making authority* and control in their *hands* and take full responsibility for *all actions*. They structure the situations in their own way and expect the workers to follow their orders. They will not allow any *deviation* from their orders. The subordinates are instructed to carry out their orders *without any question*. Also the subordinates entirely depend on their leader and normally they *suffer* in the absence of their leaders. Some autocratic leaders are tough and highly dictatorial and are a source of fear or intimidation. Some leaders are paternalistic depending on the approach of the leader.

The motivational approach of the leader can be *threat* and *punishment* or *appreciation* and *rewards*. When highly dictatorial, the subordinates develop a kind of fear, sense of insecurity, frustration, low morale, and will avoid responsibility. The drive and initiative in them is *killed* and they do not display their *innovative* behavior. The autocratic leader believes that his leadership is *unquestionable* as it is conferred upon him because of the position he enjoys. He also believes that his *knowledge is superior*, *power to punish* or *reward* is his *privilege*. They even impose *penalty* on *subordinates* or use *abusive language* in front of others and criticize. Rely on threats and punishment to influence staff. Autocratic leaders neither trust staff nor allow for employees input.

This style permits quick decisions, as there is only a single person to take decisions. There are also many members who prefer working under strict discipline and under central authority. However a majority of members do not like strictness and discipline especially because motivation is negative.

Characteristics of Autocratic Leadership

The following are the common characteristics of autocratic leaders:

- The leader makes the decisions and closely supervises employees
- Highly conscious of his /her position
- They are sensitive about their authority
- One-way communication
- They are willing to delegate a **very little** decision-making authority
- The leader believes that pay is just a reward for working and the only reward that will motivate employees
- Orders are issued to be carried out with no questions allowed and no explanations needed

Advantage

Autocratic Leadership most effective:

- ❖ When new, untrained staff do not know which tasks to perform or procedures to follow
- ❖ When effective supervision provided only through detailed orders and instructions
- ❖ When staff do not respond to any other leadership style
- ❖ When limited time in which to make a decision
- ❖ When work needs to be coordinated with another department or organization

Disadvantage

Autocratic leadership should not be used or ineffective:

- ❖ Staff become tense, fearful, or resentful
- ❖ Staff depend on their leader to make all their decisions
- ❖ Low staff morale, high turnover and absenteeism and work stoppage

2. Democratic or Participative Leadership

In this type of leadership style, subordinates are *consulted* and their feedback is taken into *decision-making* process. Also known as *participative style* and this style encourage staff to be part of the decision making. The leader Keeps staff informed about everything that affects their work and shares decision making and problem-solving responsibilities. The leader acts more as a

moderator and of course he takes responsibility for the results. The leader in this type recognizes the fact that there are employees who are capable to give innovative ideas, intelligent, skillful, competent, suggestive etc. obviously the group members get an opportunity to display their talents and are encouraged to demonstrate initiative and creativity. The members thus get a chance to participate in decision-making. This incidentally leads to a good management-labor understanding or relations, higher morale and greater job satisfaction.

This style is very useful when you have educated labor, experienced, dedicated and ready to work independently with nil or least directives. By this you are developing a set-up conducive to growth and development. Good climate is generated for growth and individual personality development too.

Characteristics of Democratic Leadership

- Share decision making authority with subordinates
- leader appreciates suggestions from subordinates; two ways of communication
- The leader shows high concern for both task and people; Leaders are not sensitive about their authority
- New ideas/change proposed by a group is respected; Develops a feeling of responsibility within the group; Motivates subordinates with subordinates;
- Generally, increases the quality of work and productivity;
- If forced to make a decision alone the leader explains his/her reason to the group/subordinates

Advantages

Democratic leadership is most effective:

- ❖ When the leader has well educated and experienced staff pull
- ❖ When the leader wants to keep staff informed about matters that affect them.
- ❖ When the leader wants staff to share in decision-making and problem-solving duties.
- ❖ When the leader wants to provide opportunities for staff to develop a high sense of personal growth and job satisfaction.
- ❖ When the leader faces large or complex problem that requires lots of input to solve
- ❖ When the leader assumes changes must be made or problems solved that affect staff
- ❖ When the leader wants to encourage team building and participation

Disadvantages

- ❖ Not enough time to get everyone's input
- ❖ Manager feels threatened by this type of leadership
- ❖ Staff safety is a critical concern

3. Laissez-Faire or Free Rein Leadership Style

This style also known as the “**hands-off**” style. In this style, a leader provides little or no direction and gives staff as much freedom as possible. In this style, all authority or power is given to the staff and they determine goals, make decisions, and resolve problems on their own.

Here the group members perform everything and the manager keeps liaison with outside only to get materials for the group to perform. This style leaves everything to subordinates, who make their own decisions and it helps subordinates to develop independent personality.

The leader consciously makes a decision to pass the focus of power to members, to allow them freedom of action ‘to do as they think best’, and not to interfere. Laissez faire leader does not exercise the formal authority of a leader

Characteristics of Laissez-faire Leadership

- ❖ The leader gives full decision-making authority to the group and shows little interest in the work process or its results;
- ❖ Leader exercise little control over the group/ subordinates; Individuals may have little interest in their work;
- ❖ Morale and team work are generally low.

Free rein leadership style can apply in organizations with highly skilled and well-trained professional

Advantages

An effective style to use when:

- Staff highly skilled, experienced, and educated
- Staff have pride in their work and the drive to do it successfully on their own
- Outside experts, such as staff specialists or consultants used
- Staff trustworthy and experienced

Disadvantage

- Staff feel insecure at the unavailability of a leader
- The leader cannot provide regular feedback to staff on how well they are doing
- leader unable to thank staff for their good work

- The leader doesn't understand his or her responsibilities

4. Bureaucratic Leadership Style

In a bureaucratic leadership arrangement, the focus for the leader is on making certain that employees follow the rules with consistency. Bureaucratic leadership is where the manager manages "by the book" everything must be done according to *procedure or policy*. If it isn't covered by the book, the manager refers to the *next level* above him or her. This manager is really more of a police officer than a leader. He or she enforces the rules.

Characteristics of Bureaucratic Style

- ❖ Hierarchy of authority
- ❖ Impersonality/power derived from the position
- ❖ Written rules of conduct
- ❖ Promotion based on achievement
- ❖ Specialized division of labor
- ❖ Focuses on efficiency

Advantage

Bureaucratic leadership can be effective

- When Employees perform routine tasks regularly
- Employees require specified procedures or standards to ensure consistency
- Employees use delicate or dangerous equipment
- Employees perform tasks comprising handling of substantial cash
- Employees work on construction sites.
- Public officers *who lead* public institutions

Disadvantages

- Work habits formed that are hard to break, especially if they are no longer useful.
- Employees lose their interest in their jobs and in their fellow workers.
- Employees do only what is expected of them and no more
- Discourages innovation and creativity

5. The Charismatic Leader

People tend to think of leaders as people who influence others to follow by the power of their *charismatic personality*. The "*charismatic*" leader is able to articulate a compelling vision that

responds to the needs and aspirations of the followers. *Charisma is a form of interpersonal attraction that inspires support and acceptance.* Charismatic leadership is accordingly a type of influence based on the leader's personal charisma.

Charismatic leaders are likely to have a lot of self-confidence, firm confidence in their beliefs and ideas, and a strong need to influence people. Charisma can be based on anything from *physical appearance* to past actions and successes. Charismatic leaders are generally very skilled *communicators*. They tend to be individuals who are both verbally eloquent, but also able to communicate to followers on a deep, emotional level. These charismatic leaders use *effective communication* with their followers to gain their *trust*, and then *influence* and *persuade* them to follow. Charismatic leaders also pay a great deal of attention to *scanning and reading their environment*, and are good at picking up the moods and concerns of both individuals and larger audiences.

Transactional Leadership

Another leadership style, transactional leadership, assumes that people are motivated primarily by reward and punishment. It is based on a relationship of mutual dependence and an exchange process of: *'I will give you this, if you do that'*.

The transactional leader is more a manager than a leader, and is highly focused on getting tasks accomplished, providing very clear direction, and overseeing productivity in detail. He or she tends to think inside the box when solving organizational problems. The concern is with the work process, rather than with forward-thinking ideas. Rules, procedures, and standards are essential to the transactional leader. When a subordinate fails to meet expectations, the next step is often a penalty or punishment.

6. Transformational leadership

The transformational leadership style is one of the most implemented styles. It has integrity, defines clear goals, encourages clear steps to communication and expressive. This style of leadership encourages, motivates and supports employees, often involves recognizing and rewarding people for their good work. This type of leader inspires their team to work together towards a common target. Transformational leaders combine the best practices and are leaders who are trusted and can motivate others.

The transformational style requires a number of different skills. And its primary focus is to make change happen in our self, others, groups, and organizations. The transformational leadership style depends on high levels of communication from management to meet goals. Leaders motivate employees and enhance productivity and efficiency through communication and high visibility. This style of leadership requires the involvement of management to meet goals. Leaders focus on the big picture within an organization and delegate smaller tasks to the team to accomplish goals.

Transformational leadership occurs when leaders use ‘the four **I s**’:

- **Intellectual stimulation:** encourage others to see what they are doing from new perspectives;
- **Idealised influence:** articulate the mission or vision of the organisation
- **Individualised consideration:** develop others to higher levels of ability
- **Inspirational motivation:** motivate others to put organisational interests before self-interest

Fourteen behaviours in **three** categories identified in transformational leadership are:

Leading and developing others

- showing genuine concern
- enabling
- being accessible
- encouraging change

Personal qualities

- being honest and consistent
- acting with integrity
- being decisive

- inspiring others

- resolving complex problems

Leading the organisation

- networking and achieving
- focusing effort
- building shared vision
- supporting a developmental culture
- facilitating change sensitively

7. Servant leader

Servant leadership emphasizes the leader’s duty to serve his/her follower. Leadership arises out of a desired to serve rather than a desire to lead. It begins with the natural feeling that one wants to serve first. The Servant leader emphasis on developing their followers’ personal potential development and facilitating their personal growth. The highest priority of this leader is to encourage, support and enable people to fulfill their full potential and abilities. Servant leader works for the people. *Being a leader isn’t what to do and expecting them to do it. Need to be servant first.*

Traits of servant leadership:

- Communicator
- Open minded
- Critical thinker
- Self-directed

- Exhibits humility

Leadership Theories

For decades, leadership theories have been the source of numerous studies. In reality as well as in practice, many have tried to define what allows authentic leaders to stand apart from the mass! Hence, there are as many theories on leadership as, there are philosophers, researchers and professors that have studied and ultimately published their leadership theory. Theories are commonly categorized by which aspect is believed to define the leader the most. The most widespread one's are: Great Man Theory, Trait Theory, Behavioral Theories, Contingency Theories, Transactional Theories and Transformational Theories.

1. Great Man Theory

The Great Man theory has been introduced as the earliest theory of leadership in the 19th and early 20th centuries. This theory assumes that great leader's leadership qualities are innate/intrinsic and cannot be made. This theory sees great leaders as those who are destined by birth to become a leader.

In 1860, Herbert Spencer, an English philosopher disputed the great man theory by affirmed that these heroes are simply the product of their times and their actions the results of social conditions. Great man theory assumes that the capacity for leadership is inherent-that great leaders are born not made. This theory often portray great leaders are heroic, mythic and fated to rise to leadership when needed. This theory believes that, leaders are exceptional people, born with innate qualities, fated to lead. Hence, the theory's essential concept is that the leader is genetically able with higher qualities that distinguish him from his followers or non-leaders.

Great Man theorists accept that the abilities for effective leadership are inherent – that means great leaders are born not made. “Great Man” was used for the reason that, leadership was accepted of mostly as a male quality, especially in terms of military leadership.

The Great Man Theory of leadership is similar to the notion of divine right of kings to reign and rule over their subjects on a perpetual hereditary basis. Kings were supposed to acquire

their legitimacy from God Himself. Similarly, it was assumed that some individuals were destined to become great leaders on their own because God gave them certain inimitable abilities of a divine nature. The assumptions of this theory were based on the following

- (i) Leaders are gifts of God to mankind. A measure of divinity is attributed to leaders and their actions.
- (ii) Everyone cannot aspire to become a leader and to attain greatness.
- (iii) The inborn leadership qualities alone are necessary and sufficient for a leader to exercise influence over his followers and to become successful.

Around the late 1940s, studies on leadership started to consider the traits of those great leaders and this was where Trait theory of leadership began.

2. Trait Theories of Leadership

In the 1920's and 1930's, leadership research focused on trying to identify the traits that differentiated leaders from non-leaders. These early leadership theories were content theories, focusing on "**what**" **an effective leader is, not on 'how' to effectively lead**. The **trait approach** to understanding leadership assumes that certain physical, social, and personal characteristics are inherent in leaders. Therefore, trait theory researchers wanted to identify a set of characteristics, or traits that distinguished leaders from followers or effective leaders from ineffective leaders with the intention to help organization select the right leader who possessed those traits of effective leaders. Only candidates possessing all the identified traits were supposed to be given leadership positions.

In this regard, sets of traits and characteristics were identified to assist in selecting the right people to become leaders.

- **Physical traits** include being young to middle-aged, energetic, tall, and handsome.
- **Social background traits** include being educated at the "right" schools and being socially prominent or upwardly mobile.
- **Social characteristics** include being charismatic, charming, tactful, popular, cooperative, and diplomatic.
- **Personality/psychological traits** include being self-confident, adaptable, assertive, and emotionally stable.

- **Task-related characteristics** include being driven to excel, accepting of responsibility, having initiative, and being results-oriented.

Table 2.1 Some Traits and Skills Identified by Trait Theorists

Traits	Skills
• Adaptable to situations • Alert to social environment • Ambitious and achievement oriented • Assertive • Cooperative • Decisive • Dependable • Dominant (desire to influence others) • Energetic (high activity level) • Persistent • Self-confident • Tolerant to stress • Willing to assume responsibility	• Clever (intelligence) • Conceptually skilled • Creative • Diplomatic and tactful • Fluent in speaking • Knowledgeable about group task • Organized (administrative ability) • Persuasive • Socially-skilled

The trait approach to understanding leadership supports the use of tests and interviews in the selection of managers. The interviewer is typically attempting to match the traits and characteristics of the applicant to the position. For example, most interviewers attempt to evaluate how well the applicant can work with people.

The trait approach has the following limitations:

- ☞ There are no universal traits that predict leadership in all situations
- ☞ Not all leaders possess all of the traits identified.
- ☞ List of potentially important traits is endless. Every year new traits are added to physical, personal and intelligence characteristics.
- ☞ No consistent patterns have been found that distinguish effective leaders from the ineffective one.

- ☞ Difficult to measure traits. How much of the traits a person should have to be effective leader also remains a confusing question.
- ☞ All traits are not equally important for all situations. The importance of certain trait depending on the situation.

In general, traits alone are not the key to understanding leadership effectiveness. However, some effective leaders do not possess all of these traits, and some leaders who do possess them are not effective in their leadership roles. This lack of a consistency between the expected traits and leaders' effectiveness, led researchers to shift their attention away from traits theory and start to search for new explanations for effective leadership. Rather than focusing on what leaders are like (the traits they possess), researchers began looking at what effective leaders actually do—in other words, at the behaviors that allow effective leaders to influence their subordinates to achieve group and organizational goals.

3. Behavioral Theories

In reaction to the failure of trait leadership theory, the behavioral theories are offering a new perspective, one that focuses on the behaviors of the leaders as opposed to their mental, physical or social characteristics. Thus, with the evolutions in psychometrics, notably the factor analysis, researchers were able to measure the cause and effects relationship of specific human behaviors from leaders. From this point forward anyone with the right conditioning could have access to leadership positions. In other words, this theory reversed previous thinking as “leaders are made not born”.

3.1. The Ohio State University Studies

These studies, started in the late 1940s, attempted to find what behaviors substantially accounted for most of the leadership behavior described by employees. The study narrowed the leadership behaviors into two categories, **initiating structure** and **consideration**, under which the various leadership behaviors were grouped.

- **Initiating Structure**. This dimension refers to the extent to which a leader is likely to define and structure his or her role and those of employees in the search for goal attainment. It includes behavior that attempts to organize work, work relationships, and goals. Leaders in this category tend to define patterns and channels of communication, and spells out ways of getting the job done. They give primary emphasis to the tasks than to their employees.
- **Consideration**. This dimension refers to the extent to which a leader is likely to have job relationships that are characterized by mutual trust, respect for employees' ideas, and regard

for their feelings. People who are high in consideration show concern for followers' comfort, well-being, status, and satisfaction than organizational task accomplishments because they feel the latter is the natural consequence of the first factor.

Both factors were found to be associated with effective leadership. Followers of leaders who are high in consideration were more satisfied with their jobs; more motivated, and had more respect for their leader. Leaders who were high in initiating structure typically had higher levels of group and organization productivity along with more positive performance evaluations.

3.2. University of Michigan Studies

Similar to the Ohio State University studies, research on leadership studies was also carried out by the University of Michigan's Research centers, in 1946 by Rensis Likert and his associates. The study made an analysis of the relationship between leadership behaviors and organizational performances. Michigan Studies also identified a two-factor component, "*employee-oriented leader*" and "*production-oriented leader*".

- ***Employee-Oriented Leader:*** The concern of the employee-oriented leaders was more on the interpersonal relations with the employees and such leaders paid more attention on the needs of the employees and accepted the individual differences among members. These leaders believe in delegating decision making and aiding employee in satisfying their need by creating a supportive work environment can increase their job performances.
- ***Production-Oriented Leader:*** The production oriented-leaders paid attention to the technical aspects of the job or the tasks assigned to the employees, rather than on employees. Job centered style refers the extent the leader focusing on completing task and uses close supervision so that subordinates perform their task using specified procedure. So they focused on plan and defining work, assigning task responsibilities, clear work standard, urge for task accomplishment, technical aspect of the job. Such leaders gave least importance to the group members, and regarded the employees as only a means to achieve the ends, that is, the goals of an organization.

It can be found that the two-factor conceptualization of the Ohio study is similar to the two-way dimension of the Michigan studies. While the employee-oriented leadership can be compared with the "consideration" component of Ohio studies, production-oriented leadership can be compared with "initiating structure". While the Ohio studies considered both its components to be important for effective leadership, the Michigan studies gave supremacy to the component of "employee-orientation" over "production-orientation".

3.3. The Managerial/Leadership Grid

Like the Ohio State studies and Michigan studies, the Managerial Grid theory of leadership was also based on the styles of “concern for people” and “concern for production”. The Managerial Grid developed by Robert Blake and Jane Mouton focuses on task (production) and employee (people) orientations of managers, as well as combinations of concerns between the two extremes. They published it in 1964 and updated it in 1978 and 1985 and it becomes leadership grid in 1991.

The leadership grid is used to identify the ideal leadership style as having a high concern for both production and people. The horizontal axis of the grid (see the figure 1 below) represents the concern for production, and the vertical axis represents the concern for people. Each axis is a point scale of 1 to 9. The 1 indicates low concern, while the 9 indicates high concern. According to this model **concern for production** means the attitude of superiors towards a variety of things like quality of policy decision, procedures, work efficiency, volume of output, creativeness of research, processes etc. on the other hand, **Concern for people** refers to the degree of personal commitment towards goal achievement, maintaining the self-esteem of workers, responsibility based on trust, satisfying interpersonal relations.

Through grid training, which is still being used today, managers fill in an instrument that indicates what they would do in certain situations. The results are scored to indicate where they are on the leadership grid, one of the 81 combinations of concern for production and people. They go through training designed to help them become ideal 9, 9 managers having a high concern for both production and people. Although the grid has 81 possible combinations of concern for production and people, the model identifies five major styles:

Figure: 2.1. The Blake Mouton Managerial Grid (Blake & Mouton, 1964)

- i. **Impoverished (1, 1):** This leader has low concern for both production and people. The leader does the minimum required to remain employed in the position. The primary objective of the impoverished style is for managers to stay out of trouble. This is the least effective approach to leadership.
- ii. **Country Club (1, 9):** This leader has a high concern for people and a low concern production. The leader strives to maintain good relations and a friendly atmosphere. The primary objective of the country club style is to create a secure and comfortable atmosphere and trust that subordinates will respond positively. This style is often not good for creating or producing results. People feel good and happy, but what they are supposed to do lacks priority. Ironically, the group suffers ultimately because they fail to achieve. The style is common among leaders who are afraid of upsetting people, and/or who fear rejection and being disliked
- iii. **The sweatshop managers/authority obedience/Produce or Perish (9,1):** This leader has a high concern for production and a low concern for people. The leader uses position power to coerce employees to do the work. People are treated like machines. The primary objective of the produce or perish style is to achieve the organization's goals. This style is often referred to as autocratic. Leaders using this style seek to control and dominate others. A leader like this will commonly take the view that staff should be grateful to be employed and paid a salary. Motivation is often attempted through a threat of punishment, such as being fired, which makes this a dictatorial style. Certainly, it can be effective in the short term.
- iv. **Middle of the Road The organized-person manager (5,5):** This leader has balanced, medium concern for both production and people. The leader strives to maintain satisfactory middle-of-the- road performance and moral where there is moderate concern for both the production and the people. A balance between workers' needs and the organization's productivity goals characterize it. The primary objective of this style is to maintain employee morale at a level sufficient to get the organization's work done.
- v. **Team Management (9, 9):** This leader has a high concern for both people and production. This leader strives for maximum performance and employee satisfaction. Participation, commitment, and conflict management are emphasized. The primary objective of the team

management style is to establish cohesion and foster a feeling of commitment among workers. Leaders who behave like this blend concern for both people and organizational aims by using a collaborative teamwork approach. This involves considerable dialogue that enables the development of a shared (not imposed) motivation to achieving the organization's goals. This style normally requires that followers/the group are suitably *mature* and *skilled* for a high level of involvement.

3.4. Theory X and Theory Y

Douglas McGregor described Theory X and Theory Y in his book, *The Human Side of Enterprise*. Theory X and Theory Y each represent different ways in which leaders view employees. Theory X managers believe that employees are motivated mainly by money, are lazy, uncooperative, and have poor work habits. Theory Y managers believe that subordinates work hard, are cooperative, and have positive attitudes.

Theory X is the traditional view of direction and control by managers.

1. The average human being has an inherent dislike of work and will avoid it if he or she can.
2. The average human being prefers to be directed, wishes to avoid responsibility, has relatively little ambition, wants security above all.
3. Because of this human characteristic, most people must be controlled, directed, and threatened with punishment to get them to put forth adequate effort toward the achievement of organizational objectives.

Theory X leads naturally to an emphasis on the tactics of control - to procedures and techniques for telling people what to do, for determining whether they are doing it, and for administering rewards and punishment. Theory X explains the consequences of a particular managerial strategy. Because its assumptions are so unnecessarily limiting, it prevents managers from seeing the possibilities inherent in other managerial strategies. As long as the assumptions of Theory X influence managerial strategy, organizations will fail to discover, let alone utilize, the potentialities of the average human being.

Theory Y is the view that individual and organizational goals can be **integrated**.

1. The expenditures of physical and mental effort in work are as natural as play or rest.
2. External control and the threat of punishment are not the only means for bringing out effort toward organizational objectives.
3. Commitment to objectives is a function of the rewards associated with their achievement.

4. The average human being learns, under proper conditions, not only to accept but also to seek responsibility.
5. The capacity to exercise a relatively high degree of imagination, ingenuity, and creativity in the solution of organizational problems is widely, not narrowly, distributed in the population.
6. Under the condition of modern industrial life, the intellectual potentialities of the average human being are only partially utilized.

Theory Y's purpose is to encourage integration, to create a situation in which an employee can achieve his or her own goals best by directing his or her efforts toward the objectives of the organization. It is a deliberate attempt to link improvement in managerial competence with the satisfaction of higher-level ego and self-actualization needs. Theory Y leads to a preoccupation with the nature of relationships, with the creation of an environment which will encourage commitment to organizational objectives and which will provide opportunities for the maximum exercise of initiative, ingenuity, and self-direction in achieving them.

Contingency Leadership Theory

The Contingency Leadership theory argues that there is no single way of leading and that every leadership style should be based on certain situations, which signifies that there are some people who perform at the maximum level in certain places; but at minimal performance when taken out of their element.

According to situational theories, the **appropriate leadership style varies** from situation to situation. To a certain extent contingency leadership theories are extensions of the trait theory, in the sense that human traits are related to the situation in which the leaders exercise their leadership. Contingency theories do not deny the importance of the leader's characteristics or the leader's behavior. Both must be taken into account in the context of the situation. The following are the most popular contingency leadership theories.

A. Fiedler's Contingency Model

Fred E. Fiedler was among the first leadership researchers to acknowledge that effective leadership is contingent on, or depends on, the characteristics of the leader and of the situation. Fiedler's contingency model helps explain why a manager may be an effective leader in one situation and ineffective in another; it also suggests which kinds of managers are likely to be most effective in which situations.

In 1951, Fiedler began to develop the first situational leadership theory. He called the theory “Contingency theory of Leader Effectiveness.” Fiedler believed that one’s leadership style is a reflection of one’s personality (trait theory-oriented) and is basically constant. Managers cannot change their style, nor can they adopt different styles in different kinds of situation. According to Fiedler performance of groups is dependent on the interaction between leadership style and situational favorableness. If there is no match, Fiedler recommends that the leader can change the situation, rather than his/her leadership style.

Steps to Use the Model

- i. **Determining Your Leadership Style:** Fiedler hypothesized that personal characteristics can influence leader effectiveness. He used the term leader style to a manager’s characteristic approach to leadership and identified two basic leader styles: relationship-oriented and task-oriented. All managers can be described as having one style or the other. To determine whether one’s leadership style is task-oriented or relationship-oriented, the leader fills in the Least Preferred Coworker (LPC) scales. This is followed by determining the favorableness of the leader’s situation.
- ii. **Determining Situational Favorableness:** situational favorableness refers to the degree to which a **situation enables the leader** to exert **influence** over the followers. Fiedler identified three situational characteristics that are important determinants of how favorable a situation is for leading. These three variables, in order of importance are:
 1. **Leader-member relations:** is the relationship good or poor? Do the followers trust, respect, accept, and have confidence in the leader? Is there a friendly, tension-free situation? Leaders with good relation have more influence. The better the relations, the more favorable the situation.
 2. **Task structure:** is the task structured or unstructured? Do employees perform routine, unambiguous, standard tasks that are easily understood? Leaders in a structured situation have more influence. The more structured the jobs are, the more favorable the situation.
 3. **Position power:** is position power strong or weak? Does the leader have the power to assign work, reward and punish, hire and fire, and give praises and promotions? The leader with strong position power has more influence. The more power the leader has, the more favorable the situation becomes.
- iii. **Determining the appropriate leadership style:** to determine whether task or relationship leadership is appropriate, the user answers the three questions pertaining to situational favorableness, using the Fiedler’s contingency theory model.

☞ **Question 1:** are leader-member relations good or poor?

☞ **Question 2:** is the task structured or unstructured?

☞ **Question 3:** is position power strong or weak?

By answering these three questions consecutively we can determine the situation and appropriate leadership style. See the Fiedler's model below.

Figure: 2.2. Fiedler's contingency theory of leadership

B. LEADERSHIP CONTINUUM

Robert Tannenbaum and Warren Schmidt stated that leadership behavior is on a continuum from autocrat (or boss-centered) to democrat (or employee centered) leadership. Their model focuses on **who makes the decisions**. They identified seven major styles based on the use of boss-centered versus employee centered. As one moves away from the autocratic extreme, the amount of subordinates' participation and involvement in decision making **increases**.

Before selecting one of the seven leadership styles, the user must consider the following three factors, or variables:

- **The manager:** what is the leader's preferred style, based on experience, expectation, values, background, knowledge, feeling of security, and confidence in the subordinates?
- **The subordinates:** what is the subordinates' preferred style for the leader, based on experience, expectation, and son on? Generally, the more willing and able the subordinates are to participate, the more freedom to participate should be given.
- **The situation:** what are the environmental considerations, such as the organization's size,

structure, climate, goals, and technology? Upper-level managers also influence leadership styles.

Leadership continuum

As you read about situational variables, you will realize that they are descriptive; the model does **not** state which style to use in a situation.

1. **Autocratic/Telling Style:** the leader makes the decisions and announces them, expecting subordinates to carry out without question. In an emergency, a telling style may be most appropriate and would normally be considered justified by the group (as long as the general climate of that group is supportive and mature).
2. **Selling or Persuasive Style:** the leader takes the decisions for the group without discussion and consultation but he believes that people will be better motivated if they are persuaded that the decisions are good ones. So the leader does a lot of explanations to overcome any possible resistance and to persuade that the decisions are good. The selling style would tend to fit situations in which the group leader alone possesses all the information on which the decision must be based and which at the same time calls for a very high level of commitment and enthusiasm on the part of group members if the task is to be carried through successfully.
3. **Entertaining Concerns:** The leader **presents his/her decision and invites subordinates to ask questions about the decision.** Here also the leader makes the decision without discussion and consultation with subordinates.
4. **Developing:** The leader **presents tentative decision subject to change.** The leader confers with the group members after taking decisions and asks their feelings and their suggestion. If the subordinates' advices are appropriate and can enhance the decision, the leader may change his tentative decision.
5. **Consulting:** leader presents problem, gets suggestions, and makes decision. The leader confers with the group members before taking decision and, in fact, considers their advice and their feelings when framing decision. The leader may not always accept the subordinates' advice but they (subordinates) are likely to feel that they can have some influence. Under this leadership style the decision and the full responsibility for it remain with the leader. The consulting style is likely to be most appropriate when there is time in which to reach a considered decision and when the information on which the decision needs to be based lies among the members of the group.
6. **Framing:** The leader defines **the decision limits and asks groups to make decision** within the limit.
7. **Democratic/Joining Style:** leader permits subordinates to function within limits defined by leader. The leader will allow the decision to emerge out of the process of group discussion, instead of imposing it on the group as its boss. The leader's role is that of conference leader, or

chair, rather than that of decision taker.

C. SITUATIONAL LEADERSHIP MODEL

One of the most popular contingency theories is the situational leadership model, developed by Paul Hersey and Ken Blanchard. The model suggests that effective leaders vary their style with the maturity/readiness of followers. This model posits that the developmental levels of a leader's subordinates play the greatest role in determining which leadership style is appropriate.

Employee readiness or maturity refers to the employee's or work team's **ability** and **willingness** to accomplish a specific task and take responsibility for directing his/her/its own behavior. People tend to have varying degrees of maturity, depending on the specific task, function, or objective that a leader is attempting to accomplish through their efforts. **Ability** refers to the extent that the follower's has the skills and knowledge to perform the task without the leader's guidance. **Willingness** refers to the follower's self-motivation and commitments to perform the assigned task.

For the most part, this model (situational leadership model) takes the two dimensional leadership styles and the four quadrants, and develops four leadership styles based on amount of **directive** and **supportive** behavior provided, which they call telling, selling, participating, and delegating. Hersey and Blanchard went beyond the behavioral theory by developing a model that tells the leader which style to use in a given situation.

 **Telling:** telling has high task behavior and low support behavior. The leader provides clear instructions and specific directions. This style is appropriate when followers' readiness/maturity level is low.

- **Selling:** it has high task and high supportive behavior. Selling style is appropriate if the employees' readiness/maturity level is from moderate to low.
- **Participating:** it has high supportive behavior and low task behavior. It is best matched with a moderate to high employee readiness/maturity level.
- **Delegating:** it has low task and supportive behavior. This style is best match with high employee readiness level.

Participating		Coaching/Selling	
Delegating		Telling	
<u>D1</u>	<u>D3</u>	<u>D1</u>	<u>D1</u>
willing	willing	willing	Un-willing
Able	Un-Able	Un-Able	Un-Able

2.1.1. Transformational, transactional and servant leaders.

Modern organizations have become extremely complex because of the necessity to adapt to dynamic environmental factors. Thus, a primary organizational task is to identify and develop effective leaders who can create, implement, and control effective change strategies that align the organization's structure with its strategies. In this part of the module the transformational, transactional and servant leadership styles, attributes, skills, and behaviors will be addressed.

2.2.5.1 Transformational Leadership

The idea of transformational leadership was first developed by James McGregor Burns in 1978 and later extended by Bernard Bass as well as others. Burns states, Transforming leadership as a process where leaders and followers raise one another to higher levels of morality and motivation. The Transformational Leadership theory states that this process is by which a person interacts with others and is able to create a solid relationship that results in a high percentage of trust, that will later result in an increase of motivation, both intrinsic and extrinsic, in both leaders and followers.

The essence of transformational theories is that leaders transform their followers through their inspirational nature and charismatic personalities. Rules and regulations are flexible, guided by group norms. These attributes provide a sense of belonging for the followers as they can easily identify with the leader and its purpose.

Transformational leadership happens when a Leader encourage followers to share a vision, allowing them to achieve the vision, and providing the opportunity to develop their individual potential. Covey says, the goal of transformational leadership is to transform people and organizations in a literal sense, to change them in mind and heart; enlarge vision, insight and understanding; clarify purposes; Make behavior congruent with beliefs, principles, or values; and bring about changes that are permanent, self-perpetuating, and momentum building. Transformational leaders serve as role models, and also mentioning about how transformational leadership motivates its followers by

following Maslow's hierarchy. Transformational leader raise people from low levels of need (food, water, etc) to higher levels (self actualization).

Components of transformational leadership: “Four common I’s are”

1. Idealized influence (II): Transformational leaders behave in ways that result in their being role models for their followers. The leaders are admired, respected, and trusted.

2. Inspirational motivation (IM): Transformational leaders act in ways that inspire and encourage those around them by providing sense able and challenge to their followers, work. Team spirit is aroused. The leader gives clear information about mission, vision and expectations that followers want to meet and also show dedication towards goals and the shared long term plan.

3. Intellectual stimulation (IS): Leaders encourage their follower's hard work to be inventive and new, modern by questing assumptions, reframing the troubles, and approaching mature situations in new or different ways. Creativity is encouraged. Followers are encouraged to try new approach and are not criticized because they differ from leader's idea.

4. Individualized consideration (IC): Transformational leaders pay special focus to each individual's needs and to help them achieve their higher level needs. Trace over individual talents. Being a coacher and mentor to his followers and colleagues are developed to consecutively higher levels of potential (Kelly, 2003).

Characteristics of transformational leader: According to (Tichy and Devanna, 1986), they have seven characteristics to inspire their followers to achieve beyond the expectation.

1. They visibly see themselves as change agents
2. They are brave
3. They believe in people
4. They are driven by a strong set of values

5. They are life-long learners
6. They can cope with complexity, uncertainty and ambiguity
7. They are visionaries

Example of successful transformation leadership:

There are many leaders succeed in the way transformational leadership qualities. Mahatma Gandhi is Transformational leader representing charismatic qualities. Lou Gerstner is a transformational leader retired Chairman and CEO of IBM (1993 to 2002). He entered in IBM when it was in \$8.1 billion loss in 1993 after recognizing the company's problem are wrong validation, only looking for results and values. IBM had become small-minded and nonflexible (Sheppard, 2002). Lou Gerstner entirely transformed organizational culture. For example, shut down infamous IBM's dress code to reproduce better the clothing of their customers (Sheppard, 2002). Another example for transformational leader is Lee Iacocca, who is accredited with saving the Chrysler Corporation (1980-1992). Chrysler Corporation when it was on the edge of bankruptcy. He taken responsibility and he set about transforming the principles to his contiguous subordinates. He began to restructure the corporation's culture. Because a transformational leader gives confidence to others to become transformational leaders, soon the whole organization was packed with successful leaders (Kelly, 2003).

Transformational leadership is a contemporary view of leadership. Transformational leadership is a leadership perspective that explains how leaders change teams or organizations by creating, communicating, and modeling a vision for the organization or work unit, and inspiring employees to strive for that vision. Transformational leader can make subordinates aware of the importance of their jobs and performance to the organization and aware of their needs for personal growth and that motivates subordinates to work for the good of the organization.

The focus of transformational leadership is on top-level managers, primarily chief executive officers of large organizations. Transformational leadership is about change, innovation, and entrepreneurship. Transformational leaders are agents of change. They

develop a vision for the organization or work unit, inspire and collectively bond employees to that vision, give them a “can do” attitude that makes the vision achievable.

Some of the characteristics, or traits, of transformational leaders are the following:

- They see themselves as change agents;
- They are encouraging individuals who take risks;
- They believe in people and motivate them;
- They are value-driven;
- They have the ability to deal with complexity, ambiguity, and uncertainty;
- and
- They are visionaries. These traits are evident during leader-member exchange.

Transformational leaders perform, or take the organization through, three acts, on an ongoing basis. These are shown in the figure below.

Figure 2.3: elements/acts of transformational leadership

⊕ Act 1: Recognizing the Need for Revitalization

The transformational leader recognizes the need to change the organization in order to keep up with the rapid changes in the environment and to keep ahead of the global competition, which is becoming more competitive all the time. So transformational leaders are change agents.

⊕ Act 2: Creating a New Vision

The transformational leader **visualizes the changed organization** and **motivates** people to make it become a reality. They are visionary leaders. Visions are the most important part of the transformational leader.

Transformational leaders shape a strategic vision of a realistic and attractive future that bonds employees together and focuses their energy toward a super-ordinate organizational goal. Strategic vision reflects a future for the company or work unit that is ultimately accepted and valued by organizational members. A vision might originate with the leader, but it is just as likely to emerge from employee, clients, suppliers, or other constituents. It typically begins as an abstract idea that becomes progressively clearer through critical events and discussions with staff about strategic and operational plans. Visions are typically described in a way that distinguishes them from the current situation, yet makes the goal both appealing and achievable.

⊕ Act 3: Institutionalizing the Change

The transformational leader guides people as they make the vision become a reality. To realize the vision the transformational leader will do the following:

- a) **Communicating the Vision:** transformational leader communicate meaning and elevate the importance of the visionary goal to employees. Transformational leaders makes subordinates aware of how important their jobs are for the organization and how necessary it is for them to perform those jobs as best they can so that the organization can attain its vision and goals.
- b) **Modeling the Vision:** transformational leaders not only talk about the vision; they enact it. They “walk the talk” by stepping outside the executive suite and going things that symbolize the vision.

To succeed as a leader, you need to act consistently with your statements. If you don’t walk the talk, you lose your credibility. The greater the consistency between the leader’s words and actions, the more employees will believe and follow the

leader. Walking the talk also builds employee trust because trust is partly determined by the consistency of the person's actions.

- c) **Building Commitment to the Vision:** transforming a vision into a reality requires employee commitment. Transformational leaders motivate their subordinates to work for the good of the organization as a whole. Their words, symbols, and stories build a contagious enthusiasm that energizes people to adopt the vision as their own. Leaders demonstrate a “can do” attitude by enacting their vision and staying on course. Their persistence and consistency reflect an image of honesty, trust, and integrity. Transformational leaders build commitment by involving employees in the process of shaping the organizations vision. Transformational leaders also aware their subordinate by telling them growth of the organization is growth of employees. Transformational leaders make their subordinates aware of their own need for personal growth, development and accomplishment. Employees make aware of their own need through numerous workshops and training sessions, empowerment of employees throughout the company, the development of fast-track career programs, and increase reliance on self-managed work teams.

2.2.5.2. Transactional Leadership

Transactional theories, also known as exchange theories of leadership, are characterized by a transaction made between the leader and the followers. In fact, the theory values a positive and mutually beneficial relationship.

For the transactional theories to be effective and as a result have motivational value, the leader must find a means to align to adequately reward (or punish) his follower, for performing leader-assigned task. In other words, transactional leaders are most efficient when they develop a mutual reinforcing environment, for which the individual and the organizational goals are in sync.

The transactional theorists state that humans in general are seeking to maximize pleasurable experiences and to diminish un-pleasurable experiences. Thus, we are more likely to associate ourselves with individuals that add to our strengths.

Transactional leadership has been contrasted with transformational leadership. The transactional leadership is based on the principle of “you do this work for me and I will give this reward to you.” Transactional leadership focuses more on middle and first-line managers who help the transformational leader take their unit through the three acts.

Transactional leader motivates subordinates by rewarding them for high performance and reprimand or punish low performers. Such managers use reward and coercive powers to encourage high performance. They link job performance with valued rewards. Transactional leadership can improve organizational efficiency.

2.2.5.3. Servant Leadership

A classic and valuable observation about great leaders is that they view leadership as a responsibility, not a rank. This view is consistent with the concept of servant leadership. It is based on a commitment to serving others and to helping people use their talents to full potential while working together in organizations that benefit society.

You might think of servant leadership by asking this question: Who is most important in leadership? the leader or the followers? For those who believe in servant leadership, there is no doubt about the correct answer: the followers. Servant leadership is “other centered,” not “self-centered.” And once one shifts the focus away from the self and toward others, what does that generate in terms of leadership opportunities? Empowerment for one thing, this is the process of giving people job freedom and helping them gain power to achieve influence within the organization.

Servant leadership emphasizes the leader’s duty to serve his/her follower. Leadership thus arises out of a desire to serve rather than a desire to lead. It begins with the natural feeling that one wants to serve first.

Robert Greenleaf, founder of the Center for Servant Leadership describes it as follows:

“The servant-leader is servant first... It begins with the natural feeling that one wants to serve, to serve first. Then conscious choice brings one to aspire to lead. She or he is sharply different from the person who is leader first, perhaps because of the need to assuage an unusual power drive or to acquire material possessions. For such it will be a later choice to serve – after leadership is established. The leader-first and the servant-first are two extreme types. Between them there are shadings and blends that are part of the infinite variety of human nature.

The difference manifest itself in the care taken by the servant-first to make sure that other people’s highest priority needs are being served. The best test, and difficult to administer, is: do those served grow as persons; do they, while being served, become healthier, wiser, freer, more autonomous, more likely themselves to become servants? And, what is the effect on the least privileged in society; will they benefit, or, at least, will they not be further deprived?”

The Traditional Heroic Leader Vs Servant Leader

Traditional Boss	Servant Leader
Begins with a personal drive to achieve top position of power	Begins with a desire to serve others from any place in the organization.
Operates in a highly competitive manner. Possesses an independent mindset. Finds it important to receive personal credit for achievement	Operates in a highly collaborative and <i>interdependent</i> manner. Knows that all can gain by working together to create win/win solutions. Gives credit to others.
Uses personal power, fear, and intimidation to get what s/he wants.	Uses personal trust, respect, and unconditional love to build bridges and do what’s best for the “whole.”
Focuses solely on fast action.	Focuses on gaining understanding, input, and buy-in from all parties on essential issues. Understands that faster is often slower because people support what they help create.
Controls information in order to maintain power	Shares big-picture information. Coaches others by providing context and asking thoughtful questions to help them come to decisions by themselves.
Spends more time telling and giving orders than listening.	Listens deeply and respectfully to others, especially to those with dissenting views.
Derives a sense of confidence and personal worth from building his or her own talents and abilities.	Derives a sense of fulfillment from mentoring, coaching, and growing collaboratively with others
Sees supporters as a power base. Uses perks and titles to signal to others who has power.	Develops trust across constituencies and sees the ability to facilitate <i>interdependent</i>

	solutions as a core value. Breaks down needless barriers caused by hierarchy.
Speaks first and believes that his or her ideas are the most important. Often dominates the conversation and intimidates opponents.	Listens first. Values others' input, invites others into the conversation, and is able to build strength through differences.
. Understands internal politics and uses them for personal gain.	Is sensitive to what motivates others and balances what is best for the individual with what is best for the group.
Views accountability as assigning blame	Views accountability as creating a safe environment for learning. Ensures that lessons learned from mistakes are shared.
Uses negative humor (often put-downs and sarcasm) to control, ridicule, or exclude others.	Uses inclusive humor to lift up others and make it safe to learn from mistakes. Is the first to let themselves become vulnerable.

Characteristics of Servant Leaders are as follows:

“Servant-Leadership is a practical philosophy which supports people who choose to serve first, and then lead as a way of expanding service to individuals and institutions. Servant- leaders may or may not hold formal leadership positions. Servant-leadership encourages collaboration, trust, foresight, listening, and the ethical use of power and empowerment.”

The emphasis on serving a higher purpose has made this model popular within the Church and other religious institutions.

The Following Part of Leading

Katzenbach and Smith, authors of 'The Wisdom of Teams' talk of the "following part of leading" saying that the critical behaviors of leaders are:

Asking questions instead of giving answers: - By asking such questions such as "What do you think we should do?" Or "How do you suggest we proceed?" you take a step behind another person. Whether you state behind, of course, depends on your intention to actually follow the suggestion or answer of that other person.

Providing opportunities for others to lead you: - This goes beyond the traditional notion of looking for growth opportunity for other people. Unless the opportunity in question bears a real risk for your personal performance outcome, you are not actually positioning yourself as a follower.

Doing real work in support of others instead of only the reverse:- Rolling up your sleeves and contributing "sweat equity" to the efforts and outcomes of other people earns you their appreciation as someone upon whom they can depend, regardless of the relative hierarchical or functional position each of you holds.

Becoming a matchmaker instead of a "central switch":- In addition to following other people yourself, you must learn to help them follow each other. This requires you to get beyond considering yourself the "central switch" through which all decisions flow. Instead, you need to look for every possible chance to help people find their best collaborators. "Have you asked Sally or rushed what they think?" is often the only input required to facilitate the effort at hand, although you then must submit your effort and support to whatever the people in question suggests.

Seeking common understanding instead of consensus: - The pejorative meaning associated with consensus management has nothing to do with either effective leading or effective following. Leaders who know when and how to follow build deep common understanding, not superficial consensus, around the purpose, goals, and approach at hand. They submit themselves and others to the discipline of ensuring that all sides to any disagreement are fully understood by everyone, recognizing that mutual understanding is far more powerful than any particular decision to choose path A over path B. All people will follow strong, commonly understood purposes and goals more easily than the "put- up jobs" associated.

They go on to say that the indicators of when a leader must follow are:

Individual performance	As a leader, you must follow another individual, regardless of hierarchy, if: • That individual, through experience, skill, and judgment, knows best. • That individual's growth demands that you invest more in his or her skill and self-confidence than in your own. • Only that individual, not you, has the capacity (the time and opportunity) to "get it done"
Team performance	As a leader, you must follow the team if: • The team's purpose and performance goals demand it • The team, not you, must develop skills and self-confidence • The team's agreed-upon working approach requires you, like all the others, to do real work
Organizational performance	As a leader, you must follow others, regardless of hierarchy, if: • The organization's purpose and performance goals demand it • The need for expanding the leadership capacity of others in the organization requires it • "Living" the vision and values enjoins you to do so

Table 2.4. Indicators of servant leader

Team Leadership

In the late 1970's Meredith Belbin conducted a study of teams focusing on the factors separating successful and unsuccessful teams via a college business game at Henley a feature of which was shared leadership. Through the game Belbin found that the composition of the team was important and that individual differences in style, role and contribution far from underlining personal weaknesses, were a source of potential team

strength. Balanced teams comprised of such individuals who engaged in complementary role behavior performed better than unbalanced teams.

Nine distinctive roles were identified in the study, with most people being found to embrace a mix of two or three roles whilst also avoiding others with which they were uncomfortable. Where there was an individual with clear, useful and appreciated attributes they would fit into a team on the basis of the strengths they brought. These people would also have weaknesses that belonged to the same cluster of characteristics as the strength itself. These potential deficiencies were considered the price that has to be paid for a particular strength, a price that is worth paying, and were referred to as ‘allowable weaknesses. Belbin found no ‘ideal’ team member, individual who could perform all of the roles.

From this work, Belbin drew the distinction between the “Solo” and the “Team” leader. He suggests that “leaders are not notable for admitting their weaknesses, whether allowable or not. They act as though they have no weaknesses”. To many people the image of the leader - a person heading up a team of followers, ever ready to take on any role and assuming any responsibility - is very familiar to us for it is the one based upon our past experiences and beliefs. Belbin classified such leaders as ‘Solo leaders’ and in the workplace this type of behavior may have great advantages, for internal barriers can be overcome and decisions, especially those of an urgent nature, can be made and put into effect with little or no delay.

The increasing complexity and the discontinuous nature of modern work however, poses greater problems where Solo leadership is less appropriate and ‘Team leadership’ more suited. The key difference between the ‘Solo leader’ and ‘Team leadership’ revolves around the behavior and participation of the two as illustrated below:

SOLO LEADER	TEAM LEADER
Plays unlimited role – the Solo Leader interferes in everything	Chooses to limit role to preferred team roles – delegates roles to others
Strives for conformity – the Solo Leader tries to mould people to particular standards	Builds on diversity – the Team Leader values differences between people
Collects acolytes – The Solo Leader collects	Seeks talent – The Team Leader is not threatened by people

admirers and sycophants	with special abilities
Directs Subordinates – subordinates take their leads and cues from the Solo Leader	Develops colleagues – the Team Leader encourages the growth of personal strengths
Projects objectives – the Solo Leader makes it plain what everyone is expected to do 1. Chooses to limit role to preferred team roles – delegates roles to others	Creates mission – the Team Leader projects the vision which others can act on as they see fit

Table 2.5. Difference between the ‘Solo leader’ and ‘Team leadership’

2.2. Leadership skills and competencies

The Leadership Core Competencies are divided into five levels.

1. Managing Self

- **Integrity/Honesty:** effective leadership requires behaving in an honest, fair, and ethical manner. It demands the leader’s consistency in words and actions.
- **Interpersonal Skills:** effective leaders treat others with courtesy, sensitivity, and respect. They consider and respond appropriately to the needs and feelings of different people in different situations.
- **Continual Learning:** effective leaders are lifelong learners. They assess and recognize own strengths and weaknesses; pursues self-development strategies.
- **Resilience:** effective leaders are able to deal effectively with pressures; they remain optimistic and persistent, even under adversity.
- **Oral Communication:** Makes clear and convincing oral presentations. Listens effectively; clarifies information as needed.
- **Written Communication:** Writes in a clear, concise, organized, and convincing manner for the intended audience.
- **Flexibility:** effective leaders are open to changes and new information; rapidly adapts to new information, changing conditions, or unexpected obstacles.
- **Problem Solving:** Identifies and analyzes problems; weighs relevance and accuracy of information; generates and evaluates alternative solutions; makes recommendations and takes self-initiated actions to alleviate the problems.

2. Managing Projects

- **Team Building:** effective leader inspires and fosters team commitment, spirit, pride, and trust. Facilitates cooperation and motivates team members to accomplish group goals.
- **Customer Service:** A leader is one who anticipates and meets the needs of both internal and external customers. Delivers high-quality products and services; is committed to continuous improvement.
- **Technical Credibility:** effective leaders are technically strong and able. Understands and appropriately applies principles, procedures, requirements, regulations, and policies related to specialized expertise.
- **Accountability:** Holds self and others accountable for measurable high-quality, timely, and cost-effective results. Determines objectives, sets priorities, and delegates work. Accepts responsibility for mistakes.
- **Decisiveness:** Makes well-informed, effective, and timely decisions, even when data are limited or solutions produce unpleasant consequences; perceives the impact and implications of decisions.
- **Influencing / Negotiating:** Persuades others; builds consensus through give and take; gains cooperation from others to obtain information and accomplish goals.

3. Managing People

- **Human Capital Management:** Builds and manages workforce based on organizational goals, budget considerations, and staffing needs. Ensures employees are appropriately recruited, selected, appraised, and rewarded; takes action to address performance problems. Manages a multi-sector workforce and a variety of work situations.
- **Leveraging Diversity:** Fosters an inclusive workplace where diversity and individual differences are valued and leveraged to achieve the vision and mission of the organization.
- **Conflict Management:** Encourages creative tension and differences of opinions. Anticipates and takes steps to prevent counter-productive confrontations. Manages and resolves conflicts and disagreements in a constructive manner.
- **Public Service Motivation:** Shows a commitment to serve the public. Ensures that actions meet public needs; aligns organizational objectives and practices with public interests.
- **Developing Others:** Develops the ability of others to perform and contribute to the organization by providing ongoing feedback and by providing opportunities to learn through formal and informal methods

4. Managing Programs

- **Technology Management:** Keeps up-to-date on technological developments. Makes effective use of technology to achieve results. Ensures access to, and security of, technology systems.

- **Financial Management:** Understands the organization's financial processes. Prepares, justifies, and administers the program budget. Oversees procurement and contracting to achieve desired results. Monitors expenditures and uses cost-benefit thinking to set priorities.
- **Creativity / Innovation:** Develops new insights into situations; questions conventional approaches; encourages new ideas and innovations; designs and implements new or cutting-edge programs/processes.
- **Partnering:** Develops networks and builds alliances; collaborates across boundaries to build strategic relationships and achieve common goals.
- **Political Savvy:** Identifies the internal and external politics that impact the work of the organization. Perceives organizational and political reality and acts accordingly.

5. Leading Organizations

- **External Awareness:** Understands and keeps up-to-date on local, national, and international events and trends that affect the organization and shape stakeholders' views; is aware of the organization's impact on the external environment.
- **Vision:** Takes a long-term view and builds a shared vision with others; acts as a catalyst for organization change. Influences others to translate vision into action.
- **Strategic Thinking:** Formulates objectives and set priorities, and implements plans consistent with the long-term interest of the organization in a global environment, Capitalizes on opportunities and manages risks.
- **Entrepreneurship:** Positions the organization for future success by identifying new opportunities; builds the organization by developing or improving products or services. Takes calculated risks to accomplish organizational objectives.

3.1. Traits of good leaders and bad leaders

Good leaders have traits, if you can recognize these within leader her/his self and capitalize on followers, and then the leaders become a successful leader in the work environment.

❖ Traits of Good leader

- **Listen:**-it is important to listen others and what they are saying about each other's and the leader. Information is important management style and what others think about it.
- **Enthusiasm:** - a good leader is enthusiastic about their work or cause and about their role as a leader. Leader need to be able to be source of inspiration and be a motivator toward the required actions.

Although the responsibility and roles of a leader may be different the leader needs to be part of team working towards the goals.

- **Observations** :-observe others and note the strengths and weakness ,observe what they like to do what they dislike.
- **communication** :-effective communication will boost leadership ability be relatable, approachable, listening who come to you and encourage communication among all employees.
- **Trust**:-trust others and let their voices be heard. Allow others to participate in decisions, share leadership and distribute tasks. This will boost morale and enforce employees' worth in organization.
- **Adapt**:-react to shifting circumstances accepting difference as difference rather than as a problem. Adaptability and flexibility are key when it comes to being a good leader.
- **Self-awareness**:-somebody with good self-awareness knows their own internal states, preferences, resources and intuitions therefore can recognize their own weakness and strengths.
- **Clear vision**:-a leader with vision has a clear, vivid picture of where to go as well as a firm grasp on what success looks like and how to achieve it. But it is not enough to have a vision leaders must also share it and act up on it.

Other general traits include, but are not limited to: honesty, fair minded imaginativeness, broadminded and competences.

❖ **Bad leaders' traits**

- **Lack of energy**:-this lack of enthusiasm means that those in charge do not like new ideas or moving away from the norm.
- **Pessimism**: often bad leaders are pessimistic and set low target so they may be perceived as over achieving. These leaders are not open to challenges.
- **Lack of clear vision**:-poor leaders often vague in their vision for the success and are opposed to collaborating with others.
- **Lack of interpersonal skill**:-this comes from a refusal to listen to others and to relate to others.
