Department of software engineering

Exit multiple choice question for

Software project management

Prepared by:

@Neyatibeb

KOMBOLCHA, Ethiopia

2015 E.C

1. What are the types of requirements ?

- a) Availability
- b) Reliability
- c) Usability
- d) All of the mentioned

[View Answer](#)

Answer: d

Explanation: All the mentioned traits are beneficial for an effective product to be developed.

2. Select the developer-specific requirement ?

- a) Portability
- b) Maintainability
- c) Availability
- d) Both Portability and Maintainability

[View Answer](#)

Answer: d

Explanation: Availability is user specific requirement.

3. Which one of the following is not a step of requirement engineering?

- a) elicitation
- b) design
- c) analysis
- d) documentation

[View Answer](#)

Answer: b

Explanation: Requirement Elicitation, Requirement Analysis, Requirement Documentation and Requirement Review are the four crucial process steps of requirement engineering. Design is in itself a different phase of Software Engineering.

advertisement

4. FAST stands for

- a) Functional Application Specification Technique
- b) Fast Application Specification Technique
- c) Facilitated Application Specification Technique
- d) None of the mentioned

[View Answer](#)

Answer: c

Explanation: None.

5. QFD stands for

- a) quality function design
- b) quality function development
- c) quality function deployment
- d) none of the mentioned

[View Answer](#)

Answer: c

Explanation: None.

Take [Software Engineering Tests](#) Now!

6. A Use-case actor is always a person having a role that different people may play.

- a) True
- b) False

[View Answer](#)

Answer: b

Explanation: Use-case Actor is anything that needs to interact with the system, be it a person or another (external) system.

7. The user system requirements are the parts of which document ?

- a) SDD
- b) SRS
- c) DDD
- d) SRD

[View Answer](#)

Answer: b

Explanation: Software requirements specification (SRS), is a complete description of the behaviour of a system to be developed and may include a set of use cases that describe interactions the users will have with the software.

8. A stakeholder is anyone who will purchase the completed software system under development.

- a) True
- b) False

[View Answer](#)

Answer: b

Explanation: Stakeholders are anyone who has an interest in the project. Project stakeholders are individuals and organizations that are actively involved in the project, or whose interests may be affected as a result of project execution or project completion.

9. Conflicting requirements are common in Requirement Engineering, with each client proposing his or her version is the right one.

- a) True
- b) False

[View Answer](#)

Answer: a

Explanation: This situation is seen in every field of work as each professional has his/her way of looking onto things & would argue to get his/her point approved.

10. Which is one of the most important stakeholder from the following ?

- a) Entry level personnel
- b) Middle level stakeholder
- c) Managers
- d) Users of the software

[View Answer](#)

Answer: d

Explanation: Users are always the most important stakeholders. After all, without users or customers, what's the point of being in business?.

1. Which of the following is not a diagram studied in Requirement Analysis ?

- a) Use Cases
- b) Entity Relationship Diagram
- c) State Transition Diagram
- d) Activity Diagram

[View Answer](#)

Answer: d

Explanation: Activity Diagram comes under the design phase of SDLC.

2. How many feasibility studies is conducted in Requirement Analysis ?

- a) Two
- b) Three
- c) Four
- d) None of the mentioned

[View Answer](#)

Answer: b

Explanation: Economic feasibility (cost/benefit analysis), Technical feasibility (hardware/software/people, etc.) and Legal feasibility studies are done in Requirement Analysis.

3. How many phases are there in Requirement Analysis ?

- a) Three
- b) Four
- c) Five
- d) Six

[View Answer](#)

Answer: c

Explanation: Problem Recognition, Evaluation and Synthesis (focus is on what not how), Modeling, Specification and Review are the five phases.

advertisement

4. Traceability is not considered in Requirement Analysis.

- a) True
- b) False

[View Answer](#)

Answer: b

Explanation: Requirements traceability is concerned with documenting the life of a requirement and providing bi-directional traceability between various associated requirements, hence requirements must be traceable.

5. Requirements analysis is critical to the success of a development project.

- a) True
- b) False
- c) Depends upon the size of project
- d) None of the mentioned

[View Answer](#)

Answer: a

Explanation: Requirements must be actionable, measurable, testable, related to

Department of software engineering

identified business needs or opportunities, and defined to a level of detail sufficient for system design.

6. _____ and _____ are the two issues of Requirement Analysis.

- a) Performance, Design
- b) Stakeholder, Developer
- c) Functional, Non-Functional
- d) None of the mentioned

[View Answer](#)

Answer: b

Explanation: Option a and c are the types of requirements and not the issues of requirement analysis..

7. The requirements that result from requirements analysis are typically expressed from one of three perspectives or views. What is that perspective or view ?

- a) Developer
- b) User
- c) Non-Functional
- d) Physical

[View Answer](#)

Answer: d

Explanation: The perspectives or views have been described as the Operational, Functional, and Physical views. All three are necessary and must be coordinated to fully understand the customers' needs and objectives.

8. Requirements Analysis is an Iterative Process.

- a) True
- b) False

[View Answer](#)

Answer: a

Explanation: Requirements analysis is conducted iteratively with functional analysis to optimize performance requirements for identified functions, and to verify that synthesized solutions can satisfy customer requirements.

9. Coad and Yourdon suggested _____ selection characteristics that should be used as an analyst considers each potential object for inclusion in the requirement analysis model.

- a) Three
- b) Four
- c) Five
- d) Six

[View Answer](#)

Answer: d

Explanation: Retained information, Needed services, Multiple attributes, Common attributes, Common operations and Essential requirements are the six criterion mentioned by Coad and Yourdon.

10. Requirements should specify 'what' but not 'how'.

- a) True
- b) False

[View Answer](#)

Answer: a

Explanation: 'What' refers to a system's purpose, while 'How' refers to a system's structure and behavior.

Q1. Understanding requirements in software engineering is,

- A. To understand of what the business impact of the software
- B. What the customer wants
- C. How end users will interact with the software
- D. All of the mentioned above

Answer: D) All of the mentioned above

Explanation:

Understanding requirements in software engineering is to understand of what the business impact of the software, what the customer wants and how end users will interact with the software.

Q2. In Software Engineering works, amongst which of the following is / are responsible for software requirements,

- A. Software engineers or system engineers
- B. Analysts
- C. Project stakeholders
- D. All of the mentioned above

Answer: D) All of the mentioned above

Explanation:

In Software Engineering works, software engineers or system engineers, Analysts and project stakeholders are responsible for software requirements.

Q3. Why requirement is important in Software Engineering?

- A. To design and build an elegant computer program
- B. To understand what the customer wants
- C. To identify the resource availability for proposed system
- D. All of the mentioned above

Answer: D) All of the mentioned above

Explanation:

Requirement is important in software engineering to design and build an elegant computer program, to understand what the customer wants and to identify the resource availability for proposed system.

Q4. Amongst which of the following is / are the necessary steps for requirements engineering,

- A. To define the scope and nature of the problem
- B. To define what is required
- C. To specify the problem and reviewed or validated to understand the problem
- D. All of the mentioned above

Answer: D) All of the mentioned above

Explanation:

The necessary steps for requirements engineering is to define the scope and nature of the problem, to define what is required and to specify the problem and reviewed or validated to understand the problem.

Q5. The goal of requirements engineering is to provide a written understanding of the problem to all parties involved.

- A. True

B. False

Answer: A) True

Explanation:

The goal of requirements engineering is to provide a written understanding of the problem to all parties involved. This can be accomplished through the creation of a variety of work products, including usage scenarios, functions and features lists, requirements models, and specifications.

| [ADVERTISEMENT](#)

Q6. The distinct tasks encompasses by requirements engineering are inception, elicitation, elaboration, negotiation, specification, ____.

- A. Validation and management
- B. Design and specification
- C. Testing and coding
- D. None of the mentioned above

Answer: A) Validation and management

Explanation:

The distinct tasks encompass by requirements engineering are inception, elicitation, elaboration, negotiation, specification, validation and management.

Q7. In requirements engineering tasks inception denotes,

- A. Understanding of the problem and nature of the solution
- B. Effectiveness of preliminary communication
- C. Collaboration between the other stakeholders and the software team
- D. All of the mentioned above

Answer: D) All of the mentioned above

Explanation:

In requirements engineering tasks inception denotes about the understanding of the problem and nature of the solution, effectiveness of preliminary communication and Collaboration between the other stakeholders and the software team.

Q8. In requirements engineering tasks Elicitation refers,

- A. To establish business goals
- B. To establish communication
- C. To establish integration
- D. None of the mentioned above

Answer: A) To establish business goals

Explanation:

In requirements engineering tasks Elicitation refers to establish business goals. Once the goals have been identified, a prioritizing system has been formed, and a design justification for a prospective architecture has been developed, the process is complete.

Q9. Elaboration in requirements engineering tasks is driven by,

- A. Creation and refinement of user scenarios
- B. How the end user interacts with the system
- C. Business domain entities that is visible to the end user
- D. All of the mentioned above

Answer: D) All of the mentioned above

Explanation:

Elaboration in requirements engineering tasks is driven by the creation and refinement of user scenarios, how the end user interact with the system and Business domain entities that is visible to the end user.

Q10. Negotiation in requirements engineering is an approach of,

- A. Prioritizes requirements
- B. Assesses their cost and risk
- C. Addresses internal conflicts
- D. All of the mentioned above

Answer: D) All of the mentioned above

Explanation:

Negotiation in requirements engineering is an approach of prioritizes requirements, assesses their cost and risk and addresses internal conflicts.

| [ADVERTISEMENT](#)

Q11. A specification in requirements engineering is a written document, a set of graphical models and a formal mathematical model.

- A. True
- B. False

Answer: A) True

Explanation:

A specification is a in requirements engineering written document, a set of graphical models and a formal mathematical model.

Q12. Validation mechanism is a,

- A. Technical review
- B. Design overview
- C. Testing mechanism
- D. None of the mentioned above

Answer: A) Technical review

Explanation:

Department of software engineering

Validation mechanism is a technical review. The review team that validates the software should be user friendly.

Q13. Requirements management is a set of activities that help the project team identify, control, and track requirements,

- A. True
- B. False

Answer: A) True

Explanation:

When it comes to project requirements management, there are a number of tasks that may be performed to assist the project team in identifying, controlling, and tracking requirements and changes to requirements as the project progresses.

Q14. Requirements engineering tools assist in,

- A. Requirements gathering
- B. Requirements modeling
- C. Requirements management and requirements validation
- D. All of the mentioned above

Answer: D) All of the mentioned above

Explanation:

Requirements engineering tools assist in requirements gathering, requirements modeling, requirements management and requirements validation.

Q15. The job of a requirements engineer is,

- A. To identify areas of commonality
- B. To identify areas of conflict or inconsistency

Department of software engineering

- C. To identify the requirements that is desired by one stakeholder
- D. All of the mentioned above

Answer: D) All of the mentioned above

Explanation:

The job of a requirements engineer is to identify areas of commonality, to identify areas of conflict or inconsistency and to identify the requirements that is desired by one stakeholder.

1. The process to gather the software requirements from client, analyze and document them is known as _____.

- A. Feasibility Study
- B. Requirement Gathering
- C. Requirement Engineering
- D. System Requirements Specification

View Answer

Ans : C

Explanation: The process to gather the software requirements from client, analyze and document them is known as requirement engineering.

2. The goal of requirement engineering is to develop and maintain sophisticated and descriptive _____ document.

- A. Feasibility Study
- B. Requirement Gathering
- C. Software Requirement Validation
- D. System Requirements Specification

View Answer

Ans : D

Explanation: The goal of requirement engineering is to develop and maintain sophisticated and descriptive "System Requirements Specification" document.

3. It is the process in which developers discuss with the client and end users and know their expectations from the software.

- A. Requirements gathering
- B. Organizing Requirements
- C. Negotiation & discussion
- D. Documentation

[View Answer](#)

Ans : A

Explanation: Requirements gathering : The developers discuss with the client and end users and know their expectations from the software.

4. Which of the following is correct software metrics?

- A. Complexity Metrics
- B. Quality Metrics
- C. Process Metrics
- D. All of the above

[View Answer](#)

Ans : D

Explanation: All of the above is correct software metrics.

5. Size Metrics denoted by?

- A. LOC
- B. KLOC
- C. GLOC
- D. ZLOC

[View Answer](#)

Ans : B

Explanation: LOC (Lines of Code), mostly calculated in thousands of delivered source code lines, denoted as KLOC.

6. What are the types of requirement in Quality Function Deployment(QFD) ?

- A. Known, Unknown, Undreamed
- B. User, Developer
- C. Functional, Non-Functional
- D. Normal, Expected, Exciting

View Answer

Ans : D

Explanation: According to QFD, Normal, Expected and Exciting requirements maximizes customer satisfaction from the Software Engineering Process.

7. Why is Requirements Elicitation a difficult task ?

- A. Problem of scope
- B. Problem of understanding
- C. Problem of volatility
- D. All of the above

View Answer

Ans : D

Explanation: Users specify unnecessary technical detail that may confuse, rather than clarify overall system objectives. Also, the customers/users are not completely sure of what is needed, have a poor understanding of the capabilities and limitations of their computing environment and they do not understand that the requirements change over time.

8. What is the major drawback of CORE ?

- A. Requirements are comprehensive
- B. NFRs are not given enough importance
- C. Role of analyst is passive
- D. All of the above

View Answer

Ans : C

Explanation: In CORE the requirement specification are put together by all users, customers and analysts, so a passive analyst will not get the requirements properly.

9. How many steps are involved in Feature Oriented Domain Analysis (FODA) ?

- A. 2
- B. 3
- C. 4
- D. 5

View Answer

Ans : B

Explanation: Context Analysis, Domain Modeling and Architecture Modeling are the three steps involved in Feature Oriented Domain Analysis (FODA).

10. How many phases are there in Brainstorming ?

- A. 2
- B. 3
- C. 4
- D. 5

[View Answer](#)

Ans : B

Explanation: Preparation, Execution and Follow up are the three phases to be achieved for a successful brainstorming session.
