

Introduction to Node.js®

Internet Programming II: Lab 7

Addis Ababa Science and Technology University
Department of Software Engineering

Purpose of This Lab

- The purpose of this lab is to:
 - Practice with Nodejs Events and nodemailer
 - Practice with Nodejs Form handling
 - Practice with Nodejs and MySQL
 - Connect Nodejs with MySQL
 - Create database in MySQL using Nodejs
 - Perform CRUD operations
 - Create relations with tables
- **Before this Lab !!**
 - It's assumed that you have basic understanding of Nodejs from the previous sessions
 - It's assumed you have fundamental knowledge of MySQL

Create Form

- Create an application form that will accept Name, Email and Photo as shown below

Application Form

Name:

Email:

Photo: No file chosen

Handle Form Data

- Install formidable node module
- Write Nodejs program that will accept and save the uploaded file in a given directory
- Display appropriate error or success message
 - If it's success mention user name in your message

Connect and Create DB

- Start MySQL server and keep it running
- Install MySQL driver module into your application
- Create Nodejs MySQL connection using separate module
- Use the connection you established to create database
- Send SQL query using the connection you established, that will:
 - Create table (applications table) having the following columns
 - name, email, photo_path
 - Insert the form data accepted using the application form
 - Fetch and display list of applicants
 - Edit user data
 - Delete selected user data

Respond to Events

- Install nodemailer module
- Create “complete” event that will be fired when application data is saved successfully in the database
- Send approval email to the applicant email address when the “complete” event is fired
