

CHAPTER EIGHT

DATA ANALYSIS (AN OVERVIEW)

Compiled by Tarekegn B.

- ◉ implies editing, coding, classification and tabulation of collected data so that they are amenable to analysis.
- ◉ The term analysis refers to the computation of certain measures along with searching for patterns of relationship that exist among data-groups.

DATA PROCESSING

1. **Editing:** Editing of data is a process of examining the collected raw data (specially to detect errors and omissions and to correct these when possible).
2. **Coding:** Coding refers to the process of assigning numerals or other symbols to answers so that responses can be put into a limited number of categories or classes.

3. Classification: Most research studies result in a large volume of raw data which must be reduced into homogeneous groups if we are to get meaningful relationships.

4. Tabulation: When a mass of data has been assembled, it becomes necessary for the researcher to arrange the same in some kind of concise and logical order.

Data Analysis

- Estimating the values of unknown parameters of the population and testing of hypotheses for drawing inferences.
- The collected data are known as **'raw data.'** **meaningless unless** certain statistical treatment is given to them.

- Analysis of data means to **make the raw data meaningful** or **to draw some results from the data** after the proper treatment.

The analysis of data serves the following main functions:

1. **To make the raw data meaningful,**
2. **To test null hypothesis,**
3. **To obtain the significant results,**
4. **To draw some inferences or make generalization,**

1. descriptive analysis

- This analysis provides us with profiles of companies, work groups, persons and other subjects on any of a multiple of characteristics such as size.
- A table with numbers and percentages **describing respondents** and **non respondents**.

2. Inferential analysis

❖ *Inferential analysis is concerned with the various tests of significance for testing hypotheses in order to reach some conclusions and generalizations.*

- the More Advanced the Analysis,
Greater the Amount of Preparation
- **Data is presented through**
Graphical presentation of **data-**
Frequency polygon **curve,**
Histogram.
