

WOLLO University

Department of software engineering

Exit multiple choice question for

System programming

Prepared by:

@Neyatibeb

KOMBOLCHA, Ethiopia

2015 E.C

Department of software engineering

Select the system software that always resides in main memory

- (A). Text editor
- (B). Loader
- (C). Linker
- (D). Assembler

Answer:(B). Loader

The Daisy chain is a device used for _____?

- (A). Interconnecting a number of devices to number of controllers
- (B). Connecting a number of controller to devices
- (C). Connecting a number of devices to a controller
- (D). All of above

Answer: (C). Connecting a number of devices to a controller

if you need to create,edit and print documentSelect the softwar type should be used ?

- (A). Desktop publishing
- (B). Spreadsheet
- (C). Word processing
- (D). UNIX

Answer: (C). Word processing

The Producer consumer problem can besolved by_____?

- (A). semaphores
- (B). monitors
- (C). event counters
- (D). all of above

Answer: (D). all of above

Define bootstraping?

- (A). A language compile itself
- (B). A language compiling other language program
- (C). A language interpreting other language program
- (D). All of above

Answer: (A). A language compile itself

The Shell is the main feature of_____?

- (A). System software
- (B). DOS
- (C). UNIX
- (D). Application software

Answer:(C). UNIX

The execution of program is called

- (A). Instruction
- (B). Process

- (C). Procedure
- (D) Function

Answer: (B). Process

Select from the following that can be used as a criterion for Division of data structures used in language processing.

- (A). purpose of a data structure
- (B). nature of a data structure
- (C). lifetime of a data structure
- (D). all of the above

Answer: (D). all of the above.

Select the correct about UNIX device driver

- (A). Unstructured
- (C). Structured into two halves called top half and bottom half
- (D). None of the above

Answer: (C). Structured into two halves called top half and bottom half

what is memory

- (A). is an device that performs a sequence of process specified by instructions in memory
- (B). is a computational unit to perform specific functions
- (C). is a sequence of instructions
- (D). is the device where information is stored

Answer: (D). is the device where information is stored

Select the addressing mode, in which the operand is given explicitly in the instruction itself

- (A). immediate mode
- (B). absolute mode
- (C). indirect mode
- (D). index mode

Answer: (A). immediate mode

Select the addressing mode the effective address of the operand is generated through adding a constant value to the context of register

- (A). indirect mode
- (B). immediate mode
- (C). absolute mode
- (D). index mode

Answer: (A). indirect mode

Define garbage

- (A). allocated storage with all across path to it destroyed
- (B). un-allocated storage
- (C). allocated storage
- (D). uninitialized storage

Department of software engineering

Answer: (A). allocated storage with all across path to it destroyed

Select from the following program That not belong to utility

- (A). Spooler
- (B). Editor
- (C). Debugger
- (D). All of the above

Answer: (A). Spooler

Select the development strategy where executive control modules of a system are coded and tested first, is called?

- (A). Bottom-up development
- (B). Left-Right development
- (C). Top-down development
- (D). All of the above

Answer:(C). Top-down development

Select the systems software that does the job of merging the records from two files into one

- (A). Utility program
- (B). Documentation system
- (C). Networking software
- (D). Security software

Answer:(A). Utility program

The computer can not boot if it does not have_____?

- (A). loader
- (B). compiler
- (C) operating system
- (D). assembler

Answer: (A). loader

The Process Manager has to keep track of_____?

- (A). the priority of each program
- (B). the status of each program
- (C). the information management support to a programmer using the system
- (D). both a and b

Answer:(D). both a and b

The sequence of instructions, in a computer language, to obtain the desired result is called

- (A). Algorithm
- (B). Program
- (C). Decision Table
- (D). All of the above

Department of software engineering

Answer: (B). Program

The Action implementing instruction's meaning arget through

- (A). Instruction execution
- (B). Instruction decode
- (C). Instruction fetch
- (D). Instruction program

Answer: (A). Instruction execution

The Running time of a program base on_____?

- (A). The order in which computations are performed
- (B). The way the registers and addressing modes are used
- (C). The usage of machine idioms
- (D). All of these

Answer:(D). All of these

The bottom up parser create_____?

- (A). Right most derivation in reverse
- (B). Right most derivation
- (C). Left most derivation
- (D). Left most derivation in reverse

Answer:(A). Right most derivation in reverse

The Object program is a_____?

- (A). Translation of high-level language into machine language
- (B). Program to be translated into machine language
- (C). Program written in machine language
- (D). None of the mentioned

Answer: (A). Translation of high-level language into machine language

Select the system software based in main memory

- (A). linker
- (B). assembler
- (C). texteditor
- (D). all of these

Answer:(D). all of these

Select the Software that give permission to your computer to communicate with the user, applications, and hardware is known as

- (A). system software
- (B). word processor
- (C). application software
- (D). database software

Answer: (A). system software

Select the Programs that linked computer resources and provide an interface between users and the compute,and also used to run the

application program.

- (A). operating systems
- (B). utilities
- (C). device drivers
- (D). language translators

Answer: (A). operating systems

Select the Specialized programs that allow specific input or output devices to interact with the rest of the computer system are called

- (A). device drivers
- (B). utilities
- (C). operating systems
- (D). language translators

Answer: (A). device drivers

The type of program that performs certain tasks associated to managing computer resources. Also called

- (A). operating system
- (B). utility
- (C). language translator
- (D). None of these

Answer: (B). utility

For the computer to understand the program it must be converted into machine language by _____?

- (A). language translator
- (B). utility
- (C). device driver
- (D). operating system

Answer: (D). operating system

.

Select the function that does not belong to the operating system

- (A). Manage resources
- (B). Provide a user interface
- (C). Internet access
- (D). Load and run applications

Answer: (C). Internet access

Select the items that are used by the computer in its functioning are collectively known as

- (A). capital
- (B). stuff
- (C). resources
- (D). properties

Answer: (C). resources

Department of software engineering

Select the Programs that has all of the computer's resources add like memory, processing, storage, and devices such as printers are collectively known as

- (A). language translators
- (B). interfaces
- (C). applications
- (D). resources

Answer: (D). resources

The compiler used to transfer _____ that the computer can understand.

- (A). Source code into data
- (B). Algorithm into data
- (C). Computer language into data
- (D). None of the above

Answer: (A). Source code into data

The object code is then passed by program known as

- (A). Linker
- (B). Source code
- (C). Integer
- (D). None of the above

View Answer Report Discuss Too Difficult! Search Google

Answer: (A). Linker

When we start the the computer, a special type of absolute loader is executed, is known as

- (A). Compile and Go loader
- (B). Bootstrap loader
- (C). Boot loader
- (D). Relating loader

Answer: (B). Bootstrap loader

Define the program?

- (A). is the device where information is stored
- (B). is a sequence of instructions
- (C). is a device that performs a sequence of operations specified by instructions in memory
- (D). none of these

Answer: B). is a sequence of instructions

Select the following parts of system includes the program s or instructions.

- (A). icon
- (B). hardware
- (C). software
- (D). information

Department of software engineering

Answer: (C). software

40.

___ symbol used to separate the user name from the ISP in E-mail addresses .

- (A). %
- (B). *
- (C). .
- (D). @

Answer: (D). @

The different types of applications and documents are represented on the Windows desktop through_____?

- (A). graphs
- (B). labels
- (C). icons
- (D). symbols

Answer: (C). icons

The coordination of processor operation in CPU is controled by_____?

- (A). Registers
- (B). ALU
- (C). CU
- (D). All of the above

Answer: (C). CU

Select the inventor of microprocessor

- (A). Marican E Huff
- (B). John Atansof
- (C). Joseph Jucquard
- (D). all of the above

Answer: (D). all of the above

Select the name first microprocessor chip was

- (A). Intel4004
- (B). Intel2004
- (C). Intel3004
- (D). Intel1004

Answer: (A). Intel4004
