

Arsi University
College of Business and Economics
Department of Marketing Management
Model Exam for Exit Examination Preparation
Course: Marketing Research

Time allowed: 1:30

Part I: True / False Items

Instruction: Write **True** if the statement is correct and **False** if the statement is incorrect.

1. A marketing research problem should be defined in a way that clearly links the management decision problem with the information needed to solve it.
2. Exploratory research is most appropriate when the researcher already has a clear hypothesis and wants to measure cause-and-effect relationships.
3. A well-designed research proposal should clearly indicate the research problem, objectives, methodology, sampling design, data analysis plan, time schedule, and expected output.
4. Secondary data should be used without evaluation because it is already collected and published by other sources.
5. A descriptive research design can be used to estimate market size, describe customer characteristics, and measure customer satisfaction.
6. Causal research is stronger than descriptive research when the researcher wants to determine whether a change in one variable produces a change in another variable.
7. In questionnaire design, leading questions are recommended because they help respondents understand the researcher's expected answer.
8. Reliability refers to the consistency of a measurement instrument, while validity refers to whether the instrument measures what it is intended to measure.
9. A nominal scale allows classification of respondents into categories, but it does not allow meaningful ranking of those categories.
10. Stratified random sampling is useful when the researcher wants to ensure representation of important subgroups in the population.
11. A sampling frame is unnecessary when probability sampling is used.
12. Non-response bias may occur when the people who fail to respond are systematically different from those who respond.
13. Data coding helps convert responses into categories or numbers suitable for tabulation and statistical analysis.
14. Correlation analysis proves that one variable causes another variable.
15. A good research report should present findings, interpretation, conclusions, and recommendations in a way that directly addresses the research objectives.

Part II: Multiple Choice Questions

Instruction: Choose the best answer from the alternatives given.

1. A company notices declining sales but does not know whether the cause is price, product quality, distribution, or promotion. Which research design is most appropriate at the first stage?
 - A. Causal research
 - B. Exploratory research
 - C. Experimental research
 - D. Longitudinal research
2. Which of the following best describes the relationship between a management decision problem and a marketing research problem?
 - A. They are exactly the same and should be written in the same wording
 - B. The management decision problem focuses on what action to take, while the marketing research problem focuses on what information is needed
 - C. The research problem is always broader than the management problem
 - D. The management problem is statistical, while the research problem is financial
3. A researcher wants to determine whether a 10% price discount increases weekly sales. Which research design is most appropriate?
 - A. Exploratory research
 - B. Descriptive research
 - C. Causal research
 - D. Qualitative research only
4. Which of the following is the strongest reason for conducting marketing research before launching a new product?
 - A. To completely eliminate business risk
 - B. To guarantee profit after launch
 - C. To reduce uncertainty by generating relevant market information
 - D. To avoid the need for managerial judgment
5. Which statement best reflects a good research objective?
 - A. To study customers
 - B. To assess the effect of service quality on customer satisfaction among bank customers in Asella town
 - C. To collect data from respondents
 - D. To prepare a final report

6. A company uses customer complaint records from the past three years to identify common service problems. What type of data is being used?
- A. Primary data
 - B. Secondary internal data
 - C. Experimental data
 - D. Observational primary data
7. Which of the following is a major limitation of secondary data?
- A. It is always more costly than primary data
 - B. It may not exactly fit the current research problem
 - C. It cannot be obtained from internal records
 - D. It is always unreliable
8. A researcher conducts focus group discussions to understand why young consumers prefer one mobile banking app over another. This is mainly an example of:
- A. Quantitative causal research
 - B. Qualitative exploratory research
 - C. Experimental research
 - D. Census research
9. A survey asks 500 respondents to rate their satisfaction with a hotel on a scale from 1 = Very dissatisfied to 5 = Very satisfied. This is an example of:
- A. Nominal measurement
 - B. Ordinal measurement
 - C. Ratio measurement only
 - D. Non-metric sampling
10. Which of the following questions is most likely to create response bias?
- A. How often do you purchase soft drinks?
 - B. Which brand of soap do you usually buy?
 - C. Do you agree that our high-quality service is better than competitors' poor service?
 - D. What is your age category?
11. A questionnaire asks: "Are you satisfied with the price and quality of this product?" What is the major problem with this question?
- A. It is too short
 - B. It is double-barreled
 - C. It is open-ended
 - D. It uses a ratio scale

12. Which of the following is the best example of an open-ended question?

- A. Do you use mobile banking? Yes or No
- B. How satisfied are you with the service? Very satisfied to very dissatisfied
- C. What improvements would you suggest for this service?
- D. Which brand do you prefer? A, B, C, or D

13. A researcher wants every student in a university to have an equal chance of being selected. Which sampling method is most appropriate?

- A. Convenience sampling
- B. Judgment sampling
- C. Simple random sampling
- D. Snowball sampling

14. If a researcher divides customers into income groups and then randomly selects respondents from each group, the method is:

- A. Cluster sampling
- B. Stratified random sampling
- C. Convenience sampling
- D. Quota sampling

15. A researcher selects respondents because they are easy to access at a shopping mall. This is:

- A. Simple random sampling
- B. Systematic sampling
- C. Convenience sampling
- D. Stratified sampling

16. Which of the following most directly affects the required sample size?

- A. Desired confidence level and margin of error
- B. The title of the research report
- C. The number of questionnaire pages only
- D. The researcher's academic rank

17. A larger sample size generally results in:

- A. Higher sampling error
- B. Lower sampling error, assuming other factors remain constant
- C. No effect on sampling error
- D. Automatic elimination of all bias

18. In marketing research, non-sampling error may arise from:

- A. Selecting a sample instead of a census
- B. Interviewer mistakes, respondent dishonesty, poorly worded questions, or data entry errors
- C. Using probability sampling only
- D. Increasing the sample size

19. Which of the following best explains validity?

- A. The degree to which the same results are obtained repeatedly
- B. The degree to which a tool measures what it is supposed to measure
- C. The number of respondents in the sample
- D. The speed of data collection

20. Which of the following best explains reliability?

- A. The relevance of the research title
- B. The consistency of measurement results
- C. The ability to generalize without sampling
- D. The length of the questionnaire

21. A company wants to know whether customer satisfaction differs between male and female customers. Which analysis would most likely be useful?

- A. Comparison of group means or cross-tabulation
- B. Product life cycle analysis only
- C. Packaging analysis only
- D. Break-even analysis

22. If a researcher wants to examine the strength and direction of relationship between advertising expenditure and sales revenue, the most appropriate analysis is:

- A. Correlation analysis
- B. Frequency distribution only
- C. Coding
- D. Data editing

23. A regression model is mainly used to:

- A. Describe only frequencies of variables
- B. Examine how one or more independent variables predict or explain a dependent variable
- C. Replace sampling
- D. Avoid hypothesis testing

24. If correlation between customer satisfaction and loyalty is positive, it means:

- A. Higher satisfaction is generally associated with higher loyalty
- B. Satisfaction definitely causes loyalty
- C. Loyalty has no relationship with satisfaction
- D. Satisfaction and loyalty are identical concepts

25. Which of the following is the best example of a hypothesis?

- A. Customer satisfaction
- B. To study service quality
- C. Service quality has a positive effect on customer loyalty
- D. Questionnaire design

26. In hypothesis testing, a p-value less than the chosen significance level commonly indicates that:

- A. The null hypothesis is supported without question
- B. The result is statistically significant
- C. The sample was selected incorrectly
- D. The questionnaire is invalid

27. Which of the following best describes the role of data editing?

- A. Changing responses to support the researcher's expectation
- B. Checking data for completeness, consistency, and accuracy before analysis
- C. Selecting respondents randomly
- D. Writing the literature review

28. Cross-tabulation is especially useful when the researcher wants to:

- A. Examine relationships between categorical variables
- B. Calculate only profit margin
- C. Develop product packaging
- D. Avoid data classification

29. Which of the following is an ethical issue in marketing research?

- A. Using clear research objectives
- B. Protecting respondent confidentiality
- C. Reporting findings accurately
- D. Both B and C

30. A researcher hides the real purpose of a study and pressures respondents to participate. This violates mainly:

- A. Sampling principles
- B. Ethical principles of informed consent and voluntary participation
- C. Data coding procedures
- D. Statistical analysis rules only

31. A research report should be evaluated mainly based on:

- A. Its length only
- B. Its clarity, logical organization, accuracy, relevance to objectives, and usefulness for decision-making
- C. The number of tables only
- D. The researcher's personal opinion

32. Which of the following is the most serious weakness in a marketing research report?

- A. Including a methodology section
- B. Presenting conclusions that are not supported by the findings
- C. Using tables to summarize data
- D. Stating the research objectives

33. A company wants to monitor changes in customer satisfaction every quarter for two years. Which research approach is most appropriate?

- A. Cross-sectional study only
- B. Longitudinal study
- C. One-time exploratory interview
- D. Convenience observation only

34. Which of the following situations most clearly requires a census rather than a sample?

- A. The population is very large and geographically dispersed
- B. The population is small and every element is important to the decision
- C. The researcher has limited time and budget
- D. The researcher wants quick estimates only

35. In presenting recommendations, the researcher should primarily ensure that recommendations are:

- A. Based on findings and linked to the research objectives
- B. Based only on personal assumptions
- C. More detailed than the data allow
- D. Unrelated to management decisions

Course: Marketing Research
Answer Sheet

Name: _____ **ID No.** _____

Part I: True / False Items

Instruction: Write **T** if the statement is True and **F** if the statement is False.

No.	Answer	No.	Answer	No.	Answer
1		6		11	
2		7		12	
3		8		13	
4		9		14	
5		10		15	

Part II: Multiple Choice Items

Instruction: Choose the best answer and write the letter **A, B, C, or D** in the space provided.

No.	Answer	No.	Answer	No.	Answer	No.	Answer	No.	Answer
1		8		15		22		29	
2		9		16		23		30	
3		10		17		24		31	
4		11		18		25		32	
5		12		19		26		33	
6		13		20		27		34	
7		14		21		28		35	

Good Luck!!
